CONTENTS

06.16.25 VOL.CV NO.24

P. 14
Is AI Killing the Internet Economy?
Cover Story: AI-powered summaries are replacing the Google search that has long dominated the Web. That's bad news for a lot of businesses.
By ADAM LEVINE, TAE KIM, and ANGELA PALUMBO

P. 10
The Oil Market in a Middle East Conflict
Oil prices surged on the Israeli strike on Iran. Higher prices could linger, and much could go wrong.
By AVI SALZMAN

P. 11
The Murky Fight for Fannie and Freddie
No one knows how President Trump will take the mortgage giants public. But stakes are high for investors and home buyers.
By JOE LIGHT

P. 13
A Red-Hot Rival for Money-Market Funds
Short-term Treasury-bill ETFs are an increasingly popular place to stash cash for safe returns.
By ANDREW BARY

P. 18
The Problem with X's Investing Show
Elon Musk's social-media platform wants to shake things up with a reality show about start-ups. What it's not telling you.
By JACOB ADELMAN

P. 22
Funds: Fees Are Near Zero. What Now?
There are diminishing returns to chasing lower fees. What really matters is picking the right mix of stocks and bonds.
By IAN SALISBURY

P. 21
Sherwin-Williams Rolls On
Despite a slow housing market, the paint and coatings maker is investing in logistics, growing margins, and taking market share—and it doesn't have big tariff problems. A housing rebound could make its shares pop. By TERESA RIVAS

Sherwin-Williams' investments in a broad range of innovative paints have powered its outperformance.

UP & DOWN WALL STREET

Some observers suggest the risks in credit may lurk out of view in the opaque private markets. In the public markets, though, risk appetite is hearty.

Missiles Are Flying in The Middle East. The Market Shrugs It Off.

BY RANDALL W. FORSYTH

Sometimes what doesn't happen can be as important as what does. Case in point: the limited flight to quality in the traditional haven assets—the U.S. dollar and Treasury securities—in response to Israel's attack on Iranian nuclear facilities at the end of the past week.

The U.S. Dollar Index, which represents the greenback's value versus a basket of major currencies, barely rose from a three-year low on Friday. Treasury note and bond prices dropped, rather than rising as typically happens during periods of geopolitical stress. U.S. stocks slipped, with the S&P 500 index losing 1.13% on Friday ahead of a highly uncertain weekend after Iran launched retaliatory strikes against Israel, but the index ended the week off just 0.39%.

Oil prices did rise in reaction to the heightened tensions in the Middle East, with front-month U.S. crude futures jumping 7.26% on Friday to settle at $72.98 a barrel, a four-month high, and 27.74% higher than its recent low touched on May 5. But this may be just another leg up in a bear-market rally as the benchmark crude remains 8.82% below its Jan. 15 peak of $80.04. (See related story on page 10.)

The relative equanimity with which markets reacted to the latest escalation of Middle East conflicts may reflect expectations that the disruption in energy prices will be limited. Only a more severe damage to energy infrastructure or disruption of transit through the Strait of Hormuz, a key route for tanker traffic, would produce a lasting rise in energy prices, writes Jonas Goltermann, deputy chief markets economist at Capital Economics. Oil producers have plenty of spare capacity to offset temporary disruptions, he adds.

How different that is from a generation ago, when conflict in the region set off price spikes and long lines at filling stations in the U.S. Retail prices for regular gasoline now average $3.132 a gallon nationally, according to AAA data, off a couple of pennies from a month ago and down from $3.460 a year ago.

Prices at the pump have an outsize impact on the mood of U.S. consumers. The updated numbers from the University of Michigan released this past Friday showed improved sentiment and lower inflation expectations. The latest, lower-than-expected readings on consumer and producer prices in May also showed little impact from tariff hikes thus far, although importers' stockpiling of goods ahead of the April 2 Liberation Day import levy announcements probably muted the effects. The final level of tariffs is uncertain at this point, but various economists estimate that imports will be hit with levies of about 14%, several orders of magnitude higher than before.

The inflationary impact of tariffs and possibly higher energy costs will figure in the Federal Open Market Committee's deliberations this coming week. While no change in the Federal Reserve's key federal-funds policy rate target range, currently 4.25% to 4.50%, is likely, all eyes will be on the committee's new Summary of Economic Projections and on Fed Chair Jerome Powell's Wednesday afternoon news conference.

The big thing to watch for is the number of cuts implied by the median year-end fed-funds projection. The last SEP, released after the March confab, had a median December policy rate of 3.9%, implying two quarter-point reductions. A number of Fed watchers think the median guess may be revised to just a single quarter-point trim by December.

That would probably not sit well with President Donald Trump, who reiterated his call for Fed rate cuts following the restrained inflation releases this past week, while adding he won't "fire" Powell. A recent Supreme Court decision appeared to exempt the Fed from executive interference. But, as colleague Nicole Goodkind reports, that exemption may hang by a footnote in the court's decision. Count on Powell's job security to be a major line of reporters' questions at his presser.

That's just one of the major risks hovering over the financial markets. Along with international geopolitical risks, over which Washington appears to have diminishing influence, domestic protests spread in cities across the nation this past week. On the strictly economic front, the One Big Beautiful Bill Act for taxes and spending faces an uncertain fate in the Senate, which may play havoc with the looming federal debt-ceiling "X date," when the government's fiscal managers finally run out of wiggle room.

And yet risk markets show little stress. High-yield bond spreads, a key barometer, continue to narrow, to just over three percentage points above comparable Treasuries. That's a level that historically has been associated with junk market peaks. It also marks a sharp recovery from the recent wide level of 4.6 percentage points during April's tariff-induced swoon in stocks and other risk assets. Some observers suggest the risks in credit may lurk out of view in the opaque private markets.

In the public markets, meanwhile, risk appetite is hearty. **GameStop**, the prototypical meme stock, issued $2.25 billion of convertible securities to buy up cryptocurrencies and had to increase the size of the private deal to meet investor demand. That follows the tack of **MicroStrategy**, which has repeatedly tapped the capital markets to fund its crypto cache.

From the markets' lack of reaction, you wouldn't know missiles were flying in the Middle East while political and economic policy uncertainty reigned domestically.

Iran staged a retaliatory strike on Tel Aviv on Friday following Israel's attacks on Iran's nuclear assets.

Saeed Qaq / Getty Images

Buried in the One Big Beautiful Bill Act passed by the House of Representatives may be a path to stock mar-

ket wealth for new babies.

To spur savings for education, children born in the U.S. after Dec. 31 of this year and before Jan. 1, 2029, would receive from the government a $1,000 investment account tied to a U.S. stock index, with additional $5,000 annual contributions from their families and others permitted. In addition, some corporate leaders, such as Michael Dell, the founder of Dell Technologies, said they would match the government's initial grant for accounts of their employees' kids. The Senate is now deliberating over the bill, and odds favor the baby funds.

Families could begin withdrawing funds for educational purposes when a child turns 18. According to estimates by the Milken Foundation, that initial $1,000 would grow to $8,000 in 20 years, and $16,000 if the initial investment had been matched by corporate contributions. That maximum outcome figures to a compounded annual growth rate of nearly 11%.

Whether the U.S. stock market can deliver such heady returns in the future may be optimistic. While the proposed accounts would be invested in a market index, whose returns would probably be dominated by the huge technology stocks, some investment pros think a better option for meeting long-term education goals would be a portfolio that didn't lean so heavily on tech.

That said, the average annual return of the **Vanguard 500 Index** mutual fund (ticker: VFINX) for the 18 years through May 31 was a robust 9.9%, for an aggregate total return of 446.9%. That period takes in both the global financial crisis, which arguably started almost 18 years ago this July with the collapse of two Bear Stearns-sponsored hedge funds, and that little downdraft in 2020 from the Covid crisis. Despite the drawdowns, those who stayed the course in stocks were rewarded.

Barry Ritholtz, the eponymous cofounder of Ritholtz Wealth Management and author of the new book *How Not to Invest,* observes that keeping invested even during long, fallow periods in the stock market has paid off. While the Dow Jones Industrial Average made no net progress from 1966 all the way until 1982, Ritholtz points out that investors who persisted in dollar-cost averaging (making regular investments despite declining prices) were ultimately rewarded more than those who just plunked down a lump sum and let it ride.

Similarly, Doug Ramsey, chief investment officer at the Leuthold Group, observes that during another dry spell—when the S&P 500 posted negative returns from 2000, after the dot-com bust, through the financial crisis and into 2009—small- and mid-cap stocks managed to shine. So, it can pay to stay invested for the long term, even when the major averages don't do much.

But basing the funds now on a broad U.S. market index may be shortchanging the babies. Chris Brightman, CEO and chief investment officer at Research Affiliates, would branch out into both large- and small-cap U.S. stocks; non-U. S. developed and emerging market equities; long-term government bonds and Treasury inflation-protected securities, or TIPS; high-yield and emerging market debt; real estate investment trusts; and commodities. In other words, almost every asset class, not just the tech-dominated S&P 500, which is easily doable in this age of exchange-traded funds.

Moreover, the mix should be adjusted regularly (probably annually). In the short term, markets tend to be momentum driven; winners continue to gain, for a time, Brightman says. But over the long run, markets are "mean reverting," with big gainers eventually losing steam and cheap laggards catching up. For example, European bourses are beating the U.S. in 2025 after trailing for years. Rebalancing automatically trims the overvalued winners and adds to the neglected laggards.

On that score, while the Big Beautiful Bill specifies these accounts be invested in a U.S. stock index fund, Meb Faber, who heads Cambria Investment Management, takes Brightman's approach for his 8-year-old son's 529 account, which he has positioned entirely in foreign stocks.

And rather than just U.S. equities, Harley Bassman, managing partner at Simplify Asset Management, author of the Convexity Maven blog, and creator of the MOVE Index (the VIX of the Treasury market), would prefer a mix of 75% in a broad U.S. index such as the **Vanguard Total Stock Market Index** ETF (VTI) and an intermediate-term bond fund that's not restricted as to fixed-income sectors.

There may be objections to the cost of Uncle Sam's proposed largess to new babies. Ritholtz counters that a few billion a year to seed an education account is a pittance compared with trillion-dollar annual budget deficits. And Ramsey contrasts giving kids $1,000 with their $110,000 share of the national debt they'll be saddled with at birth.

I'd add I received a government benefit vastly more valuable than a grand's worth of stock—an excellent, rigorous free education in the New York City public schools. That was over 50 years ago, however. My hope is that tracking their investments will improve today's students' math skills. B

STREETWISE

Broadcom has returned 84% since I wrote about it here a year ago, after it cracked the top 10, and 1,785% since I recommended it in *Barron's* in 2016.

Broadcom Has Flown Under the Radar. AI Has Put It on the Map.

BY JACK HOUGH

A second fiddler to **Nvidia** in artificial-intelligence chips has quietly become the seventh-largest company in America by stock market value. **Broadcom** has returned 84% since I wrote about it here a year ago, after it had cracked the top 10, and 1,785% since I first recommended it in *Barron's* in 2016.

Back then, Broadcom was a highly successful chip roll-up, buying companies that had attractive product margins but too much corporate overhead for their size. It was also a key supplier of iPhone innards. Today, the buzz is about a type of AI chip called an XPU. The reason Broadcom keeps ending up in the right market at the right time is Hock Tan, its CEO—a Malaysian-born, Massachusetts Institute of Technology–educated executive who once did stints at **General Motors** and **PepsiCo**.

See, in 1999, Hewlett Packard sliced off the worst part of its business, a measurement company it called **Agilent Technologies**, so it could focus on computers. And in 2005, private equity bought the worst part of Agilent, its boom-and-bust semiconductor unit, and called it Avago Technologies. To run the thing, it turned to Tan, whose latest job as a semiconductor CEO had ended in a buyout. Tan went on an acquisition spree, culminating in a 2016 deal for Broadcom, whose name Avago adopted, while keeping the ticker symbol AVGO.

Deals since then have largely involved software: CA Technologies, **Symantec**'s enterprise security business, and, two years ago, VMware. Skeptics said the company was straying from its core expertise. But Tan has turned software into a source of steady, high-margin revenue to offset volatility in non-AI hardware. And in AI, demand is exploding.

If you're building an AI computing center, you're probably going to want graphics processing units, or GPUs, so named because their highly parallel processing got its first big commercial application firing pixels for videogames. The runaway leader here is Nvidia. **Advanced Micro Devices** just passed **Intel** in data center sales, but that's mostly owed to its central processing units, or CPUs, for routine tasks—its GPUs for AI are off to a slow start. That leaves Nvidia with monstrous pricing power.

If you're a hyperscale computing company, you might want to use Nvidia for only some of your AI chips, and design others yourself to save cash, or to diversify your supply chain, or even to improve performance. For some tasks, you don't need an off-the-shelf GPU that can be all things to all customers. You just need a chip that can do a specific thing. Broadcom is top dog there in something called application-specific integrated circuits, or ASICs. **Alphabet**'s Google was an early adopter of ASICs for AI and has been a key Broadcom customer for more than a decade.

The nomenclature here gets messy in a hurry. I'm seeing "XPU" a lot, although I don't think even Silicon Valley knows what it stands for. There aren't that many "x" words, and I'm ruling out the two musical instruments, xylophone and xaphoon. I've seen claims that it's an x-containing word, like extreme or auxiliary, or that the x is like an algebra variable: a whatever-you-want processing unit. Unhelpfully, Google refers to its XPUs as TPUs, as in tensor, a type of data array.

The important thing to know is that many, but not all, XPUs use ASICs, and if you want to make leading-edge ones, you're likely to call on a company that has a wealth of design and manufacturing experience, including deep ties with **Taiwan Semiconductor Manufacturing**. That means Broadcom primarily, along with companies like **Marvell Technology** and **MediaTek**.

A year ago, Broadcom had three official hyperscale AI ASICs customers. Now it's up to seven. That might not sound like a lot, but these are major players like **Meta Platforms** (Facebook, Instagram), ByteDance (TikTok), and OpenAI (ChatGPT), and there might be other, unnamed ones. New customers can continue scaling up in XPUs for years, and next-generation networking switches, which Broadcom also sells, enable clusters to put many more chips to work. Tan has said that his original three customers could reach a million chips apiece by 2027, for a combined market of $60 billion to $90 billion, with Broadcom collecting a dominant share.

Melius Research analyst Ben Reitzes reckons that will be good for AI chip revenue of $36 billion for Broadcom by 2027. And as new customers beyond the original three reach scale, growth could accelerate, with AI revenue reaching $70 billion later in the decade. For comparison, last quarter Broadcom reported AI revenue of $4.4 billion, up 46%, and predicted $5.1 billion for the current quarter. Total company revenue was $15 billion last quarter, up 20%. Free cash flow was $6.4 billion, up 44%.

That's the good news. Now for the price. "Why are you writing about a stock that's already up?" I'm sometimes asked. It's because that's what good stocks tend to do—go up. So, sometimes one that's already up goes up more. In 2016, when I first wrote about Broadcom, it had just gained 470% over five years, but that hasn't stopped it from gaining much more since.

A couple of things about that, though: One, early on, Broadcom was a value stock. I was making a case that the shares could rise to a midteens multiple of free cash flow. Now it trades at 32 times estimated free cash flow for the next four quarters. So what it does from here might be based as much on investor sentiment as economics.

Two, I'm pretty sure I'm an unremarkable stockpicker, Broadcom notwithstanding—I saved that confession for the end, in case you stopped reading halfway through. My best guess is that Broadcom can ride AI spending higher over the coming year. But to believe that it will rise another 80% or 100% in a hurry, you'd probably have to believe that it will overtake Meta, Alphabet, or **Amazon.com** in market value—a tall order. B

The COW That's a Bull

Analysts love packaging hot stocks in snappy names. The Magnificent Seven tech stocks have more than doubled since 2023's second quarter. The Mag 7's predecessor, FAANG, delivered more than 27% annualized returns in the past decade.

Now we have COW, an acronym that UBS analyst Michael Lasser coined for a trio of powerful retail brands: **Costco Wholesale**, **O'Reilly Automotive**, and **Walmart**. "During times of uncertainty, we think owning the stocks of best-in-class retailers could provide a measure of safety," he writes.

Retail stocks as a group are down some 3% in 2025. But Lasser believes that disruptive periods—like now—allow some retailers to emerge stronger than peers. Costco is a value winner with great customer loyalty. O'Reilly's supply chain is unrivaled, getting parts to mechanics in as little as 20 minutes. And Walmart is a behemoth, with a commanding grocery business, growing online presence, and reputation for low prices.

Like tech, COW stocks don't come cheap. "We believe predictability and visibility into earnings growth is what in part distinguish winners from the rest," Lasser writes. "Ultimately, an earnings multiple is a reflection of trust." In the past five years, Walmart shares, which recently traded at a 41 price/earnings ratio, have surged 141%, while O'Reilly (33) and Costco (56.5) are up some 230%—crushing S&P 500 index gains of about 90%.

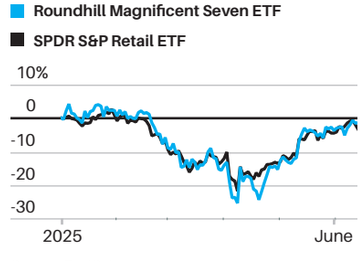
Hot to Not

The Magnificent Seven tech stocks and a broad array of retail stocks have struggled in a volatile 2025.



Source: FactSet

LAST WEEK

Markets: Monday saw trade talks beginning in London focused on the U.S. easing chip bans in exchange for China loosening rare-earth mineral restrictions. Stocks rose. Late on Tuesday, the two sides tentatively agreed to a framework to restore the trade truce and keep talking. Inflation ticked up 0.1% in May, below expectations, and yields fell on a round of Treasury auctions. Stocks rose again. But oil spiked following Israel's attack on Iran and its nuclear facilities; gold, the dollar, and Swiss franc also rose. Stocks tumbled on Friday. On the week, the Dow industrials retreated 1.3%; the S&P 500, 0.4%; and the Nasdaq Composite, 0.6%.

Companies: Apple made announcements about software and services at its developers conference, but downplayed artificial intelligence. Health and Human Services chief Robert F. Kennedy Jr., fired all 17 members of the vaccine advisory board. **Blackstone** said it would invest as much as $500 billion in Europe over the next 10 years. An Air India **Boeing** 787 crashed in India, killing over 250.

Deals: Warner Bros. Discovery said it would split next year into a streaming and studio company and a cable business...**Qualcomm** agreed to buy London chip designer **Alphawave IP** for $2.4 billion, a 96% premium...**Meta Platforms** agreed to pay $14.3 billion in cash for 49% of ScaleAI...The Wall Street Journal said satellite-and-wireless company **EchoStar** is preparing for bankruptcy...Rooftop solar company **Sunnova Energy International** filed for Chapter 11.

THIS WEEK

Tuesday 6/17

The Census Bureau reports retail and food services sales for May. Economists forecast a 0.6% month-over-month decline, following a 0.1% rise in April. Excluding autos, retail sales are expected to increase 0.2%, one-tenth of a percentage point more than previously.

Wednesday 6/18

The Federal Open Market Committee announces its monetary-policy decision. The FOMC is expected to leave the federal-funds rate unchanged at 4.25% to 4.50%. The central bank will also release its quarterly Summary of Economic Projections. Of greater interest on Wall Street is Federal Reserve Chairman Jerome Powell's news conference. Powell has been in wait-and-see mode since the implementation of the White House's tariff policy, stating that the FOMC didn't need to be in a hurry to adjust interest rates and was well positioned to respond once there was more clarity through the incoming data. With this past week's benign inflation prints and small cracks in the labor market—initial jobless claims have averaged 240,250 over the past four weeks, up 27,750 since the beginning of year—investors will be keen to hear whether Powell changes his tune.

Thursday 6/19

Equity and fixed-income markets are closed in observance of Juneteenth National Independence Day.

THE NUMBERS

34.5%
Decline in Chinese exports to the U.S. in May year over year in dollar terms, following a 21% fall in April.

$65 B
How much Mark Zuckerberg says Meta Platforms could spend on artificial intelligence this year.

3.5 M
The number of Switch 2 videogame units that Nintendo sold within the first four days of launch.

20%
Percentage of total foreign reserves in gold at the end of 2024, second to the dollar at 46%. The euro was at 16%.

War Upends the Oil Trade. How It Could Play Out.

Thirty percent of the world's seaborne oil trade flows through the Strait of Hormuz. Iran and its proxies could block it.

BY AVI SALZMAN

Israel's attack on Iran early Friday sent shock waves through the oil market, which relies on the region for one-third of global supplies. The reverberations won't go away soon.

Oil prices spiked 14% in the immediate aftermath of the attacks, before giving back some of those gains. Brent crude, the international benchmark oil price, rose 7% on Friday to $74.23 per barrel.

Based on recent history, oil's rise might seem fleeting. For most of the past three years—since the early days of the Russia-Ukraine war—geopolitical events haven't had a lasting impact on oil prices. The Israel-Hamas war and continuing violence in Ukraine have barely impacted the oil market, because they didn't dramatically affect supply and demand.

But the price shock from the Israel-Iran conflict could last weeks because major oil infrastructure could be in the line of fire. "It is something that seems like prices could remain elevated for some time," says Rob Haworth, who oversees investment strategy for U.S. Bank Asset Management Group.

If the conflict grows substantially, analysts have predicted oil prices could surge over $100 per barrel, and perhaps as high as $120.

The extent of the price-move depends on how the war escalates. Israel didn't directly strike Iran's oil infrastructure on Friday, but some analysts expect Israel to hit those facilities if the war continues. Iran, for its part, is in a position to disrupt oil shipments in the region, which could cause prices to spike even more.

Iran produces about 3.2 million barrels of oil a day, and exports between 1.5 million and two million barrels of it. That is a significant piece of the 103 million barrels of global oil production, but not enough to completely disrupt the market. Israel isn't a major player, historically pumping less than 10,000 barrels a day.

Israel could disrupt production if it hits Kharg Island in the Persian Gulf, which houses much of Iran's oil export infrastructure. Iran, in turn, has plenty of ways to respond that could affect the oil market even more. Iran and the military groups it supports, including the Houthis in Yemen, could create much wider disarray.

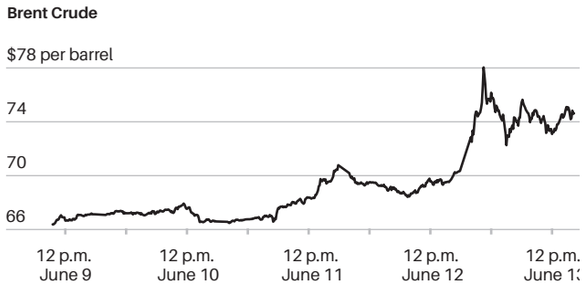
After the Israel-Hamas war began in 2023, the Houthis attacked ships in the Red Sea—some of those carried energy products—causing a brief spike in the price of oil. But the Red Sea doesn't transport that much oil.

The most important waterway is the Persian Gulf, which sits between Iran and Saudi Arabia.

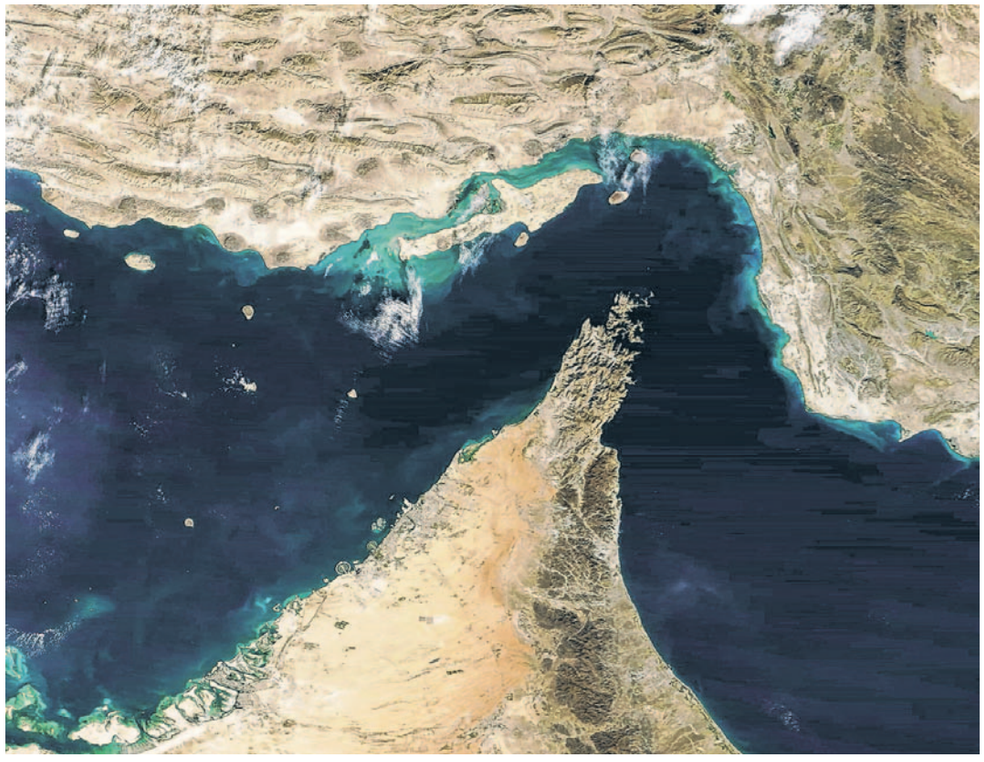
Iran and its proxies could block the Strait of Hormuz, a narrow waterway that connects the Persian Gulf to the Gulf of Oman and which offers access to markets all over the world. Thirty percent of the world's seaborne oil trade flows through it. China, which buys more of Iran's oil than any other country, is particularly dependent on supplies that come through the strait.

Shock Wave

Brent crude, the international benchmark for oil prices, surged Friday as war broke out. It made for the biggest one-week jump since 2022.



Source: Bloomberg



Iran and its proxies could block the Strait of Hormuz, which offers access to markets all over the world.

VMODIS / NASA

Financial firm Lazard thinks oil prices would surge above $120 if the strait is blocked, and the U.S. would probably have to get involved to unblock it. Lazard thinks a short disruption to the strait is possible but considers an extended blockade "highly unlikely due to catastrophic internal and international consequences and the ability of the U.S. Navy to intervene to open up the strait."

Given its location and military capabilities, Iran could impact the market in other ways. Two Saudi Arabian oil facilities were damaged in military strikes in 2019, severely curtailing oil production, and Iran was believed to be behind the attacks. Tensions between Saudi Arabia and Iran have eased since then, but Iran could widen the conflict again by hitting Saudi facilities.

J.P. Morgan analyst Natasha Kaneva thinks a wider Middle East conflict would cause an oil shock that could take prices over $120. Based on how oil traders reacted to the latest escalation of the war, she thinks the market is implying a 17% chance of a much more severe impact.

Such a dramatic price spike feels like a long shot. The overall oil supply-demand picture is still bearish, with global oil supply set to outpace demand this year because of expected production hikes from members of OPEC. "We expect, absent a wider war, today's rise in prices will likely prove to be a sell-the-news event," wrote Morningstar analyst Allen Good.

The conflict, and its higher oil prices, isn't a reason for investors to pile into energy stocks, but it's a reminder of why they can be important pieces of a portfolio. Oil stocks jumped on Friday, even as the broader market and some Big Tech names fell. **Exxon Mobil** was up 2.2%, and **Occidental Petroleum** rose 3.8%.

"When tech stalls out, there's a natural rotation to energy companies," says Jay Hatfield, portfolio manager of the **Infrastructure Capital Equity Income** exchange-traded fund. "They're actually pretty good hedges." Hatfield's fund owns Exxon and **Chevron**, which he thinks offer investors exposure to the industry without as much risk as smaller names.

Oil's gains may well fizzle out eventually. But this war appears to be far from over, and oil is right in the middle of it. B

Inside the Race to Cash In On Fannie and Freddie

The president wants to release the companies. Investors, mortgage lenders, and the government all see an angle. How it ends isn't clear.

BY JOE LIGHT

President Donald Trump just fired the starting gun for what could be the biggest public offering of all time.

In a pair of Truth Social posts in May, Trump said he wanted to take public the mortgage giants **Fannie Mae** and **Freddie Mac**. His unexpected intervention put a spotlight on the behind-the-scenes tussle over the companies. Well over a decade since Fannie and Freddie faltered at the height of the financial crisis, they are being eyed by investors and the government as a value-stuffed piggy bank that is ripe to be cracked open.

Mortgage investors and home buyers are stuck in the middle.

Whether the president makes it to the finish line is an open question, but the attempt will have wide implications for investors, the federal budget deficit, and home buyers.

The companies are the hidden gears that keep the U.S. housing market turning. The companies don't make mortgages themselves, but buy them from lenders, bundle them into mortgage bonds, and guarantee repayment to investors in case of default. Through that process, they guarantee nearly $7 trillion in mortgage-backed securities, or MBS, and provide liquidity to banks and other mortgage lenders so they can keep making more loans. For decades, their stocks were blue-chip staples in investors' portfolios, but the companies failed in the 2008-09 financial crisis and entered a so-called conservatorship controlled by the U.S. government.

If Trump is to be believed, that is about to change.

"I am working on TAKING THESE AMAZING COMPANIES PUBLIC," wrote Trump. "These Agencies are now doing very well, and will help us to, MAKE AMERICA GREAT AGAIN!"

Strictly speaking, the companies are already public. Before 2008, the companies issued roughly $35 billion in preferred stock, and that stock as well as the common shares continue to trade in the over-the-counter market.

The 2008 bailout eventually cost the Treasury about $190 billion. In return the government received warrants to acquire nearly 80% of the companies' common shares as well as a new class of "senior" preferred stock that would rank above all privately owned shares in a restructuring. Those senior preferreds now have a liquidation preference of more than $340 billion, representing the government's claim to proceeds in a restructuring before other investors get paid out. How the government's stake is resolved will determine whether certain investors win or lose their bets on the companies.

Hedge fund managers such as Bill Ackman and John Paulson—both major Trump supporters—scooped up shares of Fannie and Freddie for pennies on the dollar after 2008. Since Trump's victory and the president's statements, the shares have skyrocketed. The market value of some classes of Fannie and Freddie's preferred shares, favored by many hedge funds, has more than doubled since the election. Fannie and Freddie's common shares, a slug of which is owned by Ackman, are up more than 500%.

Some investors have estimated that Fannie and Freddie could need to raise more than $30 billion to have enough capital to stand on their own two feet, which would put the offering ahead of **Saudi Aramco**'s $29 billion capital raise in 2019, the largest of all time.

Treasury Secretary Scott Bessent in interviews before the president's posts said the administration didn't plan to tackle Fannie and Freddie until after finishing Trump's tax bill and tariff push. He said the administration's guiding principle would be that whatever is done can't raise mortgage rates.

The Treasury Department pointed to those statements when asked for comment.

Among the least excited about a potential public offering are investors in Fannie and Freddie's trillions of dollars in MBS as well as the mortgage-industrial complex of lenders, servicers, and real estate agents that depend on the steadiness of Fannie and Freddie for a strong housing market.

Mortgage rates would probably rise if the government released Fannie and Freddie, many analysts believe, though details are uncertain and will matter. Among them is the level of capital the companies will be forced to hold in reserve. Fannie and Freddie could have to raise their mortgage fees just to earn a return on capital that is palatable to investors, which would probably raise rates.

"Remaining in conservatorship is a better outcome than a quick and poorly conceived exit," says Bob Broeksmit, who heads the Mortgage Bankers Association, an industry trade group.

Any plan to return Fannie and Freddie to private hands will also need to address whether and how the U.S. government will continue to backstop the companies' MBS. The companies were originally chartered by Congress as quasigovernmental entities. Their executives long insisted they had no government guarantee, but investors traded the securities as if they had such a backstop anyway. When the companies failed in the 2008-09 crisis, the government made that "implicit" backing official.

Now, some mortgage lenders and fund managers are worried about how investors would treat the bonds if Fannie and Freddie left government control. Any doubt about the government's backing could raise mortgage rates.

"I want to be clear, the U.S. Government will keep its implicit GUARANTEES, and I will stay strong in my position on overseeing them as President," Trump wrote in a Truth Social post in May.

That latest message from the president leaves the path ahead unclear. It suggests that despite his earlier pledge to take Fannie and Freddie public, he still intends to retain control of them somehow. That prospect has worried some Fannie-Freddie shareholders in recent days.

There are indications that the president's posts surprised some administration officials. Treasury officials had told some mortgage investors in the days before the posts that serious work wouldn't begin on a plan until after the president's One Big Beautiful Bill Act passed Congress, according to a person familiar with the matter.

"Any actions under consideration

will be carefully evaluated in a safe and sound manner to deliver on the president's historic agenda," said White House spokesman Harrison Fields in a statement.

Former private-equity executive Bill Pulte leads the Federal Housing Finance Agency, or FHFA, and controls the conservatorship for Trump. In meetings, he has expressed an interest in listing Fannie and Freddie shares on the New York Stock Exchange, where they haven't traded since 2010. That move would probably raise the price and liquidity of shares and could make them eligible to be owned by more investors.

Otherwise, Pulte has said he is deferring to the president for what exactly should happen with the companies, according to people familiar with the meetings.

In TV interviews since Trump's posts in May, Pulte has said he can't imagine Trump relinquishing control of the companies and that the president could decide to sell shares of the companies without them actually leaving government control.

"We are studying how, if the president elects to take Fannie and Freddie public, it can be done in the safest and soundest manner, which includes keeping them in conservatorship," said an FHFA spokesperson in a statement. "In any scenario, we will ensure the MBS market is safe and sound and that there is no upward pressure on rates."

A plan could turn a Fannie and Freddie offering into less of a bonanza for private shareholders and more of a government cash grab if Trump decides to hold on to the companies but somehow monetize the government's stake of warrants and senior preferred shares. Sales of the shares could go to pay down the deficit or become the seed corn for a sovereign wealth fund.

"The hard part is we don't even know what they're motivated to get. Is it revenue? Is it a payout for shareholders?" says Michael Bright, who heads the Structured Finance Association, a trade group that represents bond investors.

Still, some analysts think that Trump will eventually get a complete release done. Analysts for policy research firm Capstone assign an 80% probability that Fannie and Freddie will be privatized under Trump. A potential next step, say the analysts, is an executive order from the White House that directs agencies to come up with a release plan.

Key to Ackman and other shareholders' investment thesis is for the government to essentially waive its $348 billion in preferred shares. That is called for, given the $301 billion in dividends that Fannie and Freddie have paid to the government since being taken over, the shareholders argue. If the government doesn't waive its preferred shares, its stake—along with that of the private preferred shareholders—could be converted to common stock, heavily diluting private investors.

"Shareholders don't have their hands out. The opposite is the case," Ackman said in an X post on June 3. "Hundreds of billions of dollars of funds that belonged to [Fannie and Freddie] were unilaterally taken by the government years ago, and the companies never received credit for these payments."

But it may be an uphill climb. The first Trump administration attempted to end government control of Fannie and Freddie before being derailed by Covid-19. In that process, the Treasury Department found that waiving the senior preferred balance would be illegal, wrote former FHFA director Mark Calabria in a 2023 book. It was instead considering converting the government stake to common equity.

Calabria now works at the Office of Management and Budget. An OMB spokesperson did not respond to a request for comment.

Ackman and other investors have argued that if their shares are wiped out, demand for the companies' new shares would evaporate.

"Ultimately, the government has to clarify what Treasury is going to do with its senior preferred stake. That's the billion-dollar question in all this," says Capstone analyst Spencer Van Every.

Also unanswered is whether the companies will pay a fee to the government for their backstop, whether the government will retain a stake in the companies, and even whether Trump will give up control.

For nearly 17 years, the countries' largest MBS investors, hedge funds, mortgage lenders, and the government have jockeyed over how to resolve the last outstanding bailout from the 2008-09 crisis and, in so doing, determine the future of $7 trillion in mortgage bonds and hundreds of billions of dollars' worth of stock. There's no telling where the companies end up, but the fight is on. B

These Are The Hottest Bond ETFs This Year

Treasury-bill ETFs are challenging money-market funds and bank deposits as a place for retail investors to park cash.

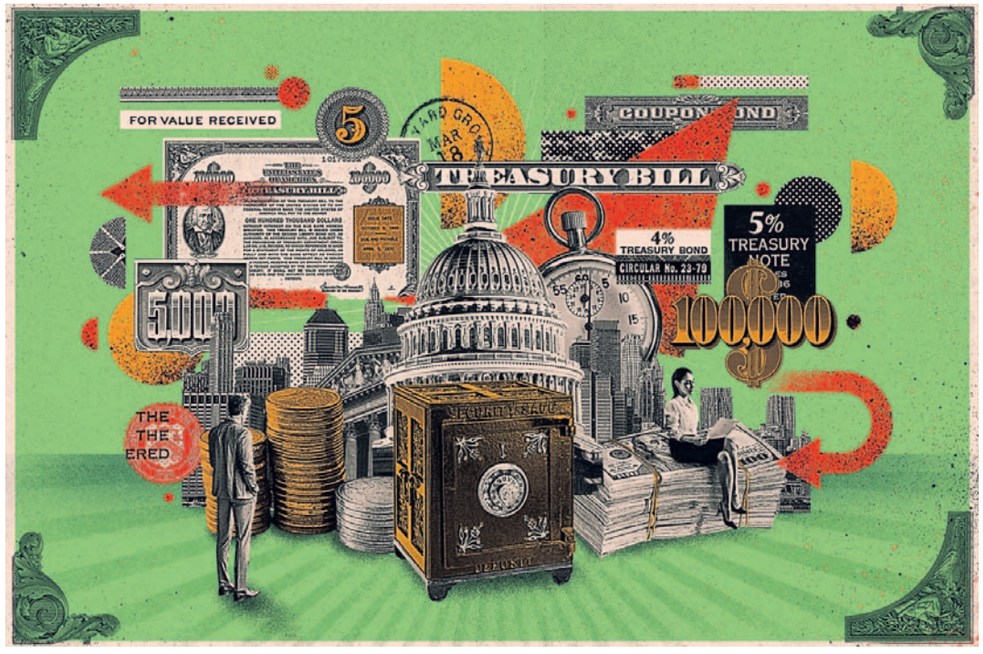

Illustration by Eduardo Ramón Trejo

BY ANDREW BARY

Treasury bills have rarely been more attractive, and exchange-traded funds make owning them easier than ever.

Investors have been warming to Treasury bills—government bonds maturing in less than a year—which offer security and ample yields now above 4%. That yield is roughly double the current 2% inflation rate, one of the wider gaps of the past 20 years. They also yield nearly as much as 10-year Treasuries, at 4.35%, and don't carry the price risk of the 10-year notes.

Berkshire Hathaway CEO Warren Buffett has long stashed the bulk of the company's ample cash reserves in Treasury bills because they're the safest short-term bond investments. Berkshire now holds over $300 billion of Treasury bills, or about 5% of the entire $6 trillion market. Retail investors are also getting in on the act: Noncompetitive bids at Treasury auctions, a reflection of retail demand, are running at about $15 billion a month.

Reflecting the boom in fixed-income exchange-traded funds, Treasury-bill ETFs are rapidly gaining in popularity and challenging money-market funds and bank deposits as a place for retail investors to park cash. T-bill ETFs now hold over $100 billion in assets, but are dwarfed by money-market funds, which have $7 trillion in assets.

The two largest are the $48 billion **iShares 0-3 Month Treasury Bond** ETF, which launched in 2020, and the $44 billion **SPDR Bloomberg 1-3 Month T-Bill** ETF, which has been around since 2007. Vanguard entered the market in early 2025 with the **Vanguard Ultra-Short Treasury** ETF, which has an annual fee of just 0.07%, against 0.09% for the iShares ETF and 0.14% for the SPDR ETF. They yield in the 4.2% to 4.3% range. The iShares ETF has attracted $18 billion of inflows this year, the most of any bond ETF.

Unlike Treasury notes and bonds, which pay semiannual interest and principal at maturity, T-bills are sold at a discount to their face value of $100, or 100 cents on the dollar, and the interest payment is the difference between the purchase price and face value. If an investor buys a three-month T-bill paying 4%, the purchase price would be around $99, with the investor getting $100 at maturity.

Investors can buy Treasury bills directly through the Treasury.gov website. The government sells four-week, eight-week, 13-week, 17-week, and 26-week Treasury bills at the weekly auctions. The 52-week bill is auctioned every month. With a noncompetitive bid, investors agree to accept the average yield set by institutional holders.

Investors can also participate in T-bill and other Treasury debt auctions through banks and brokers. At Fidelity, there is no charge for retail investors to place noncompetitive bids online, and the firm offers an "auto roll" feature that allows investors to automatically reinvest the proceeds of maturing T-bills in new securities.

The T-bill ETFs, however, offer advantages over buying direct, including simplicity, a diversified pool of securities, monthly income, and ready liquidity on the New York Stock Exchange or Nasdaq. One benefit over money-market funds is taxes. Interest on T-bills is exempt from state and local taxes, a nice plus for investors in states like New York and California, where income-tax rates can top 10%. Certificate of deposit interest is subject to state and local taxes, as is much or all income from money funds, including many popular "government" funds.

In fact, some big government money-market funds, including the $399 billion Fidelity Government Money Market fund and $354 billion Vanguard Federal Money Market fund, don't hold a lot of actual U.S. Treasuries. The Fidelity money fund, for instance, has over half of its assets in repurchase agreements, which are short-term loans secured by Treasuries or federal agency securities. Repos are very safe, but they're not Treasuries, and interest on them isn't exempt from state and local taxes.

And then there are fees. While the T-bill ETFs have fees of about 0.1% annually, the Fidelity Government Money Market fund charges 0.42% for the largest class shares, while the $369 billion Schwab Prime Advantage Money fund charges 0.34%. The Vanguard Federal Money Market fund charges only 0.11% annually.

The fee gap can be significant. For someone with $1 million, a T-bill ETF would offer $2,000 to $3,000 in added income a year plus tax benefits for those in high-tax states.

Unlike money-market funds, which are sold at a fixed price of $1, T-bill ETFs trade like stocks on an exchange. Their prices rise each month as the underlying T-bills accrete interest and then drop when they pay monthly dividends. This can result in small gains or losses when they are sold. Still, they are very liquid—the iShares and SPDR ETFs trade with penny spreads between bid and ask prices and have $1 billion of average daily volume. "You can do huge trades of $200 million to $300 million with tight execution," says Dhruv Nagrath, director of fixed-income strategy at BlackRock.

The biggest risk might be lower interest rates. That would force investors to reinvest their money at lower rates. T-bill rates are already down a percentage point in the past year, and the markets are now anticipating another half-point cut by year end.

That would still leave T-bill rates at nearly 4%, and Matthew Bartolini, head of ETF research at State Street Advisors, which manages the SPDR fund, doesn't expect them to fall dramatically. It's a great time for "T-bill and chill," and ETFs are an ideal way to do it. B

Bill of Fare

Exchange-traded funds offer a simple way to invest in short-term Treasuries.

ETF / Ticker	Recent Price	Assets (billion)	YTD Net Flows (billion)	Recent Yield	Expense Ratio
iShares 0-3 Month Treasury Bond / SGOV	$100.48	$48.7	$18.6	4.3%	0.09%
SPDR Bloomberg 1-3 Month T-Bill / BIL	91.53	44.1	8.0	4.2	0.14
iShares Short Treasury Bond / SHV	110.18	20.3	1.3	4.3	0.15
Alpha Architect 1-3 Month Box / BOXX	112.43	6.6	1.9	4.4	0.19
Goldman Sachs Access Treasury 0-1 Year / GBIL	99.93	6.0	0.2	4.1	0.12
Vanguard Ultra-Short Treasury / VGUS	75.35	0.2	0.2	4.2	0.07

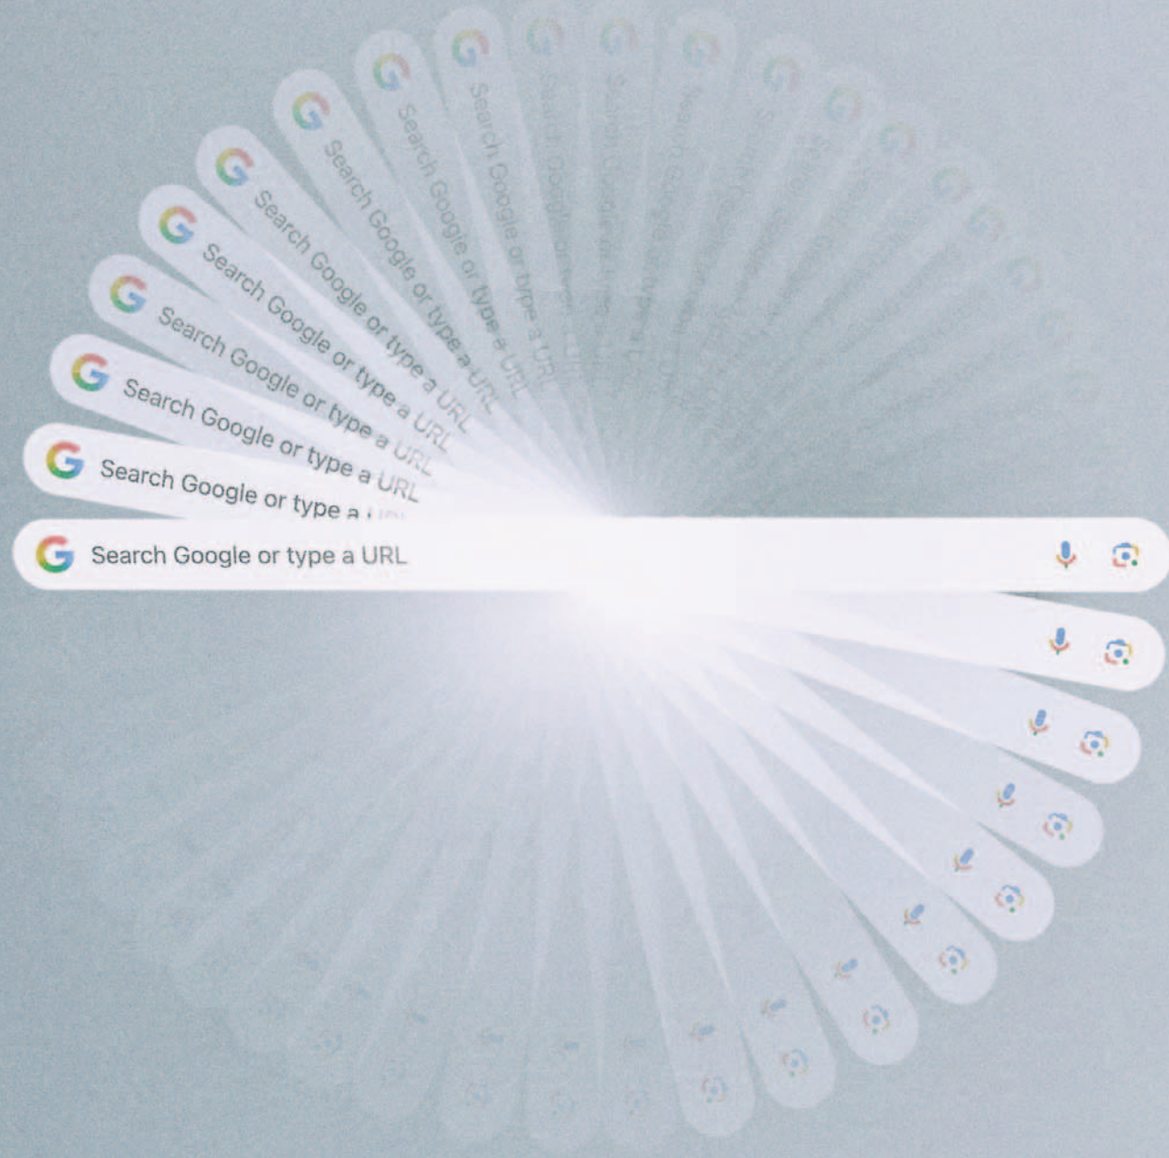
Google Search Is Fading. The Whole Internet Could Go With It.



The lifeblood of the internet is drying up. What the decline of search means for users, companies, and stocks.

BY ADAM LEVINE, TAE KIM, AND ANGELA PALUMBO

Illustration by Nicolas Ortega

Experience a random pain in the 21st century and an internet search usually comes before a call to the doctor. Googling "chest pain," "high fever," or "skin rash" calls up a series of blue links followed by a frenzied trip across the web. A similar pattern plays out, minus some anxiety, for "today's weather," "restaurants near me," and "high-yielding dividend stocks."

Roughly one in five visits to the world's top internet sites begin on search engines, according to data from analytics firm Semrush. At Wikipedia, search generates 63% of global visits. For travel site Tripadvisor, it's 58%; for local review site **Yelp**, it's 51%.

But internet search traffic has been falling for much of the past year as web surfers experiment with artificial-intelligence-powered search from OpenAI's ChatGPT and AI start-up Perplexity AI. So far, referrals from AI search engines have replaced about 10% of the traditional search losses, according to Similarweb data.

Google is pushing back by adding AI-powered summaries to the top of its search results, de-emphasizing its traditional blue links and thereby further reducing search traffic. May could prove to be a tipping point.

Last month, search referrals to top U.S. travel and tourism sites tumbled 20% year over year, according to the latest data from Similarweb. E-commerce companies saw their referrals fall 9%. For news and media sites, search traffic dropped 17%. The finance, lifestyle, and food-and-drink categories all saw similar types of declines on the month.

Across the web economy, the trend is clear: Search is drying up, and Google is no longer the clear-cut way to drive audiences to websites. The changes have begun to force a reckoning across various industries.

Late last month, Business Insider, a leading digital news publication, cut 21% of its staff, citing traffic drops that were "outside of its control."

"Business models are under pressure, distribution is unstable, and competition for attention is fiercer than ever," Business Insider CEO Barbara Peng wrote to employees.

Reddit, the social-media site and source of answers to many random

Search's Rapid Decline

Growth rates for U.S. search trafic have been slowing across various sectors for the past year. But the decline accelerated in May, across key sectors of the internet eceonomy.

SEARCH: THE INTERNET'S LIFEBLOOD

57%

Breakdown of Reddit.com visits that came from search in May, according to web analytics firm Semrush

19%

Nearly one in five visits to the world's top internet sites begin on search engines.

10%

Lost search traffic that has been replaced by AI search engines from ChatGPT and Perplexity, according to Similarweb

17%

Drop in search referrals to top news and media sites in May

questions, which gets 57% of its visits from search, is making deals with AI firms and rolling out its own AI-driven search engine.

Chegg, a homework-help company, worth $15.1 billion at its peak in 2021, said earlier this year that traffic declines had given it no choice but to explore strategic alternatives, including a possible sale.

On Wall Street, no company has faced greater worries about the future of search than Google itself. Shares of parent **Alphabet** are down 7% on the year; the company now gets counted as a value stock in some investor benchmarks.

But Google has countermeasures. For one, it has diversified itself into a cloud-computing giant, and it's a winner in the nascent category of autonomous driving. Google itself is also no slouch in the generative-AI world, with massive resources to build and improve its Gemini large-language models.

Instead, as traditional search fades in importance, it's the rest of the internet that will suffer.

In May, monthly U.S. search traffic to Schwab.com fell for the first time in at least two years, according to Similarweb, down 14%. A year ago, search referrals to Schwab were up 179%. TripAdvisor's search tumbled 34% on the month, while Starbucks saw a 41% decline to its website. Search to **Netflix**, a pioneer in digital strategies, was down 23%.

The traffic conversation has the feel of the 1990s and early aughts before Google arrived and companies were still trying to figure out how to attract audiences across the World Wide Web.

Executives are talking up deals with OpenAI's ChatGPT, Perplexity, and other AI-driven search tools. "We're partnering with AI search companies to ensure our brands show up well across customer queries," said Expedia CEO Ariane Gorin in May, "and building new experiences to connect with travelers outside our ecosystem."

There's a long way to go. Based on Similarweb's U.S. estimates, Expedia got 88,000 referrals from AI search engines in May. It got 34 million referrals from search.

The Google Effect

ChatGPT was something of a novelty when the model made its public debut in November 2022, generating a wave of songs, poems, and essays across the web. But the latest models, which are more sophisticated and promise humanlike reasoning, have spurred a surge of new use. ChatGPT had 500 million weekly active users in March, rising from 300 million in December. Many of them pay $20 a month for service; parent company OpenAI says it reached an annualized revenue run rate of $10 billion this month, up from $5.5 billion at year end.

Another start-up, Perplexity, has taken on Google more directly. "A direct line to the world's knowledge—compressed, cited, and made clear," Perplexity says on its about page. "No gimmicks. No fluff. Just answers that make sense."

(*Barron's* owner Dow Jones has sued Perplexity for copyright infringement.)

As AI pressure mounts on Google, the company has moved to defend its 89% U.S. market share in search. A year ago, it launched so-called AI Overviews atop Google search results, promising condensed AI-generated answers to search queries.

Those overviews, which initially appeared on a small number of searches, have been appearing more frequently. An analysis by research firm Ahrefs said that the prevalence of AI Overviews have more than doubled from March 12 to May 6.

The AI summaries have spurred debate across the internet, with publishers worried about a search query that delivers answers in a few paragraphs, with no need to click for more info. According to Similarweb data from March, searches with AI Overviews resulted in a click 23% of the time. For searches without the overviews, the click rate was 36%.

"Looking at search results that do show an AI answer, comparing that with search results that do not show an answer, we found a crazy drop-off," said Kevin Indig, a search-engine optimization, or SEO, consultant and author of the Growth Memo blog. "This is a click killer."

Google told *Barron's* that third-party data offer an incomplete picture of search trends.

In February, online education platform Chegg said search trends had crushed its business. CEO Nathan Schultz told investors: "We would not need to review strategic alternatives if Google hadn't launched AI Overviews, retaining traffic that historically had come to Chegg, materially impacting our acquisitions, revenue, and employees."

Asked for comment, the company directed *Barron's* to a lawsuit it filed in February against Google. It alleges that Google is using its search dominance to "coerce online publishers like Chegg to supply content that Google republishes without permission in AI-generated answers that unfairly compete for the attention of users on the internet."

Chegg shares have tumbled 99% since 2021.

Google says its AI Overviews have improved the search experience and are being embraced by users. A Google spokesperson says that AI Overviews show more links to a wider range of sources on results pages.

"More than any other company, Google prioritizes sending traffic to the web, and we continue to send billions of clicks to websites every day," the Google spokesperson told *Barron's*.

In April, during Google's earnings call, an analyst asked company executives about the impact that AI Overviews was having on click-through rates. "I don't think this is the moment to go into the details of click-through rates and conversion and so on," said Philipp Schindler, Google's chief business officer. "But overall, we're happy with what we're seeing."

'Heavy Construction'

Reddit has become a battle ground and flashpoint in the argument about search's future. The stock is down 28% so far this year as investors worry about slowing user growth on the social-media site.

It's a trend the company has attributed to an evolution in search. The company remains a standout in search, and it points out that "Reddit" is the No. 6 searched term on Google. Still, traffic trends have notably shifted in recent months. In May 2024, Reddit's search referrals soared 78%, according to Similarweb. This past May, searches to the site were up 14%.

Reddit's daily user growth, meanwhile, has gone from 37% in the first quarter of 2024 to 31% in 2025.

Reddit Chief Operating Officer Jennifer Wong said in an interview with *Barron's* that search is under "heavy construction." Wong is confident about the long-term opportunity for Reddit, noting that its human-generated content will be especially sought after to train the large language models that run AI. Reddit has a deal with OpenAI. For now, that kind of licensing is a small part of the

For personal non-commercial use only. Do not edit or alter. Reproductions not permitted.
To reprint or license content, please contact Barron's reprints department at 800-843-0008 or www.djreprints.com

business, accounting for less than 9% of revenue in the most recent quarter.

"Nobody knows how Google is going to cross this canyon and the kind of ripple effects that they'll have across the internet," Wong says. "What I do know is that I think human intelligence is still going to be worth a lot, and it's going to go up and up in value, and I think Reddit is the place for that."

Wall Street generally agrees. Across 29 analysts covering Reddit, the average price target is $152, 31% above its recent close.

Going forward, investors should pay attention to a company's search exposure. Across the categories, certain brands are far less dependent on Google's referrals. **Airbnb**, for instance, got 14% of referrals from search in March, versus the 58% for travel firm Tripadvisor, according to Semrush. **DoorDash** and **Uber Technologies** were 13%. Social-media apps like **Pinterest** and **Meta** Platform's Instagram also tend to be far less search-dependent than much of the internet. Their sites drew 23% and 17% of referrals from search, respectively.

In May, Pinterest's CEO told investors that 85% of users come directly to the company's mobile app.

Hedging Against Search

Meta Platforms, which essentially shares the online advertising pie with Google, is in an enviable position. As search traffic falls and traditional search advertising wanes, businesses will be compelled to advertise on Instagram and Facebook, Meta's social networks that are insulated from search disruption.

Meanwhile, Meta can use AI to improve ad effectiveness and personalization. As Google defends itself against AI, Meta is free to fully embrace it.

Ultimately, the best hedge against AI disruption is the company empowering it all: **Nvidia**. As AI explodes, Nvidia will sell more AI chips and the infrastructure to power data centers. Newer reasoning-focused AI models are particularly profitable for Nvidia because they require 100 times the computing resources compared with prior AI chatbots, Nvidia CEO Jensen Huang told investors on Nvidia's recent earnings call. "Reasoning models are driving a step-function surge in inference demand," he said.

From Disrupter to Disrupted

As Google Search comes under threat for the first time in two decades, a U.S. district judge is determining the company's fate. Judge Amit Mehta ruled in August 2024 that Google was a monopoly in general search services and general text advertising.

Alphabet and its investors are now waiting for the judge to determine potential remedies. A penalty phase of the trial concluded last month, and Mehta is expected to issue a final decision in August.

The timing is notable. Alphabet was ruled a monopoly around the same time that it was pushing out AI Overviews. Less than a year later, search is facing a massive competitive shift as users increasingly embrace chatbots.

Apple's senior vice president of services, Eddy Cue, testified that searches in Apple browsers fell for the first time in April as people increasingly turned to AI for search queries. Google pays billions of dollars to Apple annually to make its search engine the default option on Apple browsers.

But don't expect Google's recent weakness to affect Mehta's decision.

Antony Haynes, partner at Dorf Nelson & Zauderer, told *Barron's* that even though these new competitive threats have become more prevalent since the judge made his ruling, it's unlikely those threats will affect his decisions regarding remedies.

"We're not thinking about a remedy for potential future technology changes. We're looking at what they did in the past," Haynes said.

That past includes one of the best business models ever created. Last year, Alphabet's operating margin was 32% versus an aggregate 14% for **S&P 500 index** companies. Meanwhile, since Alphabet went public in 2004, the stock has returned an annualized 23.7%, versus 10.6% for the S&P 500.

A post-search world will probably weigh on those margins, but Alphabet stock already reflects the next phase. It trades at 17.8 times expected earnings for the next 12 months, below the S&P 500's 22.5 multiple.

Barron's has remained bullish on the stock, including in a November 2024 cover story and a follow-up last month.

Google will be fine. It's the rest of the internet that should be worried.

A Reality Show On Investing Comes to X—Viewers Beware

"Going Public," now on X, lets viewers invest in start-ups. Two of the entrepreneurs have a checkered past.

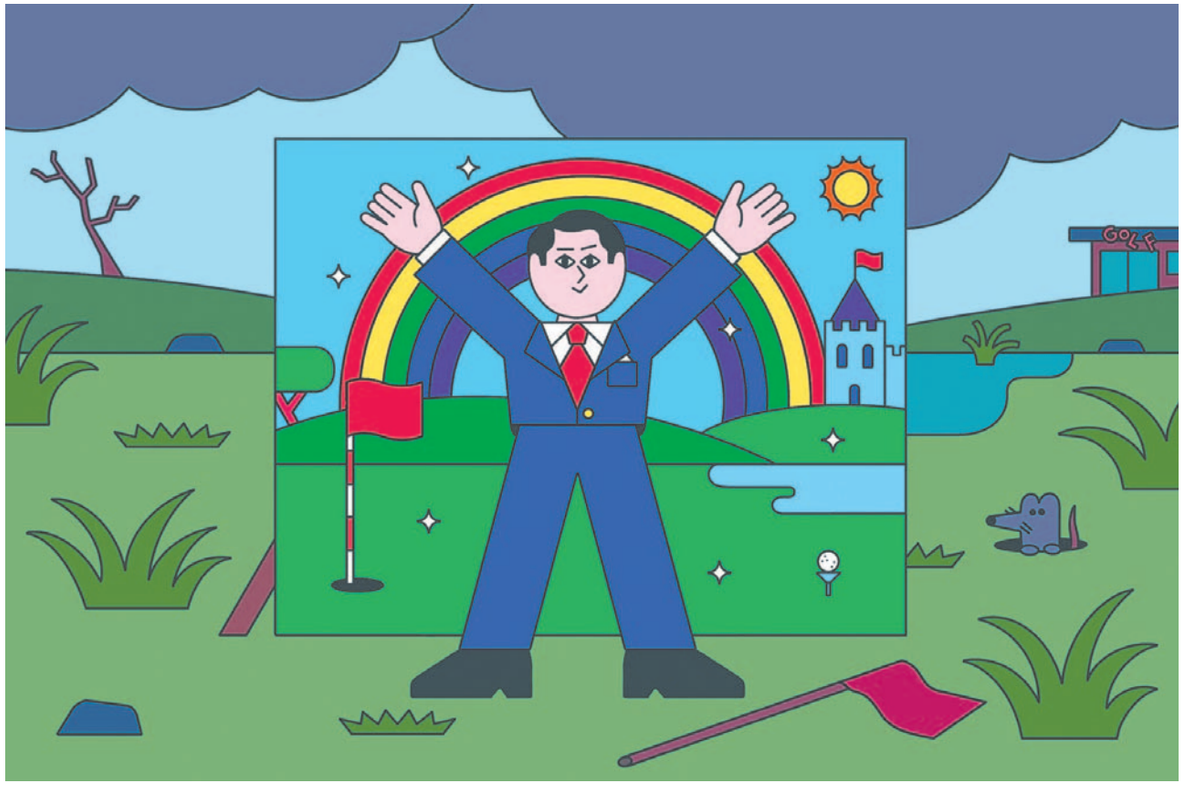

Illustration by Andrea Chronopoulos

BY JACOB ADELMAN

Elon Musk's X says it wants to shake up financial media with a reality TV show that forms a key plank of its original programming initiative. The series, *Going Public*, introduces promising start-ups that viewers can invest in while they watch.

Going Public "embodies our commitment to giving smaller investors a voice, as well as the chance to own a piece of the future," Brett Weitz, then X's content chief, said as the social-media platform announced its "landmark partnership" with the show earlier this year.

Viewers will need to do their own vetting. The founders of one featured start-up—Dutch Mendenhall and Amy Vaughn—have been under investigation by state and federal regulators, *Barron's* has learned. Some investors in their previous venture, RAD Diversified REIT, say the business cost them their life savings.

Mendenhall and Vaughn didn't reply to a list of questions from *Barron's*.

The final episode of *Going Public*, which is scheduled to stream live on June 24, will feature a "Click-to-Invest" button. The finale had previously been planned for Friday, June 13. It was postponed after a version of this story appeared online.

Going Public's producers "felt the live finale needed to go even further, that you deserved more," they wrote in a June 13 email to the show's mailing list, hours before the finale had been scheduled to stream on X. "So, plans have changed."

Spotlighting start-ups could invite new scrutiny for X, which has dealt with allegations of misinformation on its platform and has seen a string of missteps in its push to build a viable original-content business.

"There's a big difference between building financial literacy and turning fund raising into reality TV," says social-media consultant Matt Navarra.

Going Public is part of a new programming lineup at X that also includes a Khloé Kardashian talk show and a business program hosted by prominent crypto investor Anthony Pompliano. Darren Marble, co-creator of *Going Public*, has described his show as "*Shark Tank* meets *Apprentice*, where there is a real-time investing component."

"F*ck CNBC. Forget Bloomberg. Ignore FOX," *Going Public*'s producers wrote in a June 3 promotional email sent to the show's mailing list. "They missed the mark—we're rewriting the rules."

Over the course of four prerecorded episodes, company founders perform adrenaline-fueled stunts—blasting junked cars with guns, dangling from a supertall skyscraper—to prove their entrepreneurial grit. They sit for interviews in a hangared jet while wired to "the *Going Public* polygraph." They engage with dance music impresario Steve Aoki, poker champ Phil Hellmuth, and a venture capitalist, Cyan Banister, who appear as backers and mentors.

Baseball Hall of Famer CC Sabathia is presented on the show as a potential investor in Mendenhall and Vaughn's new venture, a turnaround firm for struggling golf courses called OmniCo Golf.

"CC committed to a show appearance," a spokesperson for Sabathia tells *Barron's*. "After the pitch was made, he had his team do due diligence and passed on the investment opportunity."

This season's other featured start-ups are a cashew-based beverage company co-founded by celebrity video-gamer Tyler "Ninja" Blevins and a business-software maker.

During the season's livestreamed finale, viewers will be able to buy shares in the start-ups through crowdfunding provisions enabled by the 2012 legislation known as the Jobs Act.

"No velvet rope. No closed doors," the *Going Public* website promises. "This is your insider access to the deals and insights defining tomorrow."

This report is based on interviews with former employees of RAD Diversified REIT, all of whom asked not to be identified, and with past RAD investors. *Barron's* also reviewed internal company communications, including recordings of closed-door teleconferences with top investors, as well as hundreds of pages of legal filings, regulatory disclosures, and property records.

Going Public receives financial compensation for promoting the start-ups that appear on the show. An entity controlled by Mendenhall paid $500,000 to publicize the offering of OmniCo securities, according to a disclaimer page on the *Going Public* website. Mendenhall also invested $500,000 in the show's production company, according to the disclaimers.

Going Public's pay-to-play arrangement expands on the social-media advertising campaigns touting market-beating returns that Mendenhall and Vaughn used to recruit investors for their Tampa, Fla.-based RAD real estate fund.

In an April videoconference with top investors, Mendenhall said RAD's real estate portfolio was worth as much as $180 million. The company has over 7,000 investors,

For personal non-commercial use only. Do not edit or alter. Reproductions not permitted.

Vaughn said in a **Facebook** Reels video posted in January.

Former employees tell *Barron's* that the sky-high returns touted in RAD's ads were based on valuations set by RAD executives, not outside appraisers. RAD investors who have filed lawsuits against the company alleging breach of contract have obtained judgments against the company, which offered no response to the claims.

Some investors and former employees say they've been interviewed by Securities and Exchange Commission investigators about the company's practices. Florida's Office of Financial Regulation is also investigating RAD, according to a message sent to investors soliciting testimony.

An SEC spokesperson said the agency doesn't comment on the existence or nonexistence of a possible investigation. The Florida regulator didn't respond to a phone message.

In episode two of *Going Public*, Mendenhall, whose uses his given name Brandon on some RAD disclosures, is attached to the polygraph machine and asked if he's ever had investors accuse him of stealing their money.

"Yes," Mendenhall says, before explaining that the claims were due to clerical delays during a former chief financial officer's illness.

The scene ends without the polygraph operator providing any results.

During the April videoconference, Mendenhall portrayed RAD as under siege from "haters" and the *Going Public* creators as allies. When two unhappy RAD investors contacted *Going Public* to share their complaints about RAD, Mendenhall said, the show advised them to "file a lawsuit."

"I'm not going to say *Going Public* told them to piss off," Mendenhall told the conference participants. "But *Going Public* told them to be adults."

Marble and his *Going Public* co-creator Todd Goldberg didn't respond to questions about Mendenhall's recollection, the show's financial arrangements, or their due diligence surrounding RAD. X didn't respond to messages seeking comment. Messages about the show's postponement on Friday also went unreturned.

"Going Public" creators Todd Goldberg (left) and Darren Marble.

Crush Capital / PR Newswire; Going Public

Goldberg had spent time in medical-device marketing and Marble was a specialist in crowdfunding investments when they formed their production company for *Going Public* in 2020.

After streaming two seasons of the show on legacy media websites, Goldberg and Marble secured a brief introduction with X CEO Linda Yaccarino at a hotel bar in Dallas in August 2024.

"Within two minutes, she's like 'I love it, let's do it,'" Marble recounted in a recent podcast interview. "She said, 'We move quick, we use simple agreements.' And sure enough, two months later, the deal was signed."

X's licensing and distribution arrangement for *Going Public* represents "a pivotal moment in media and investment landscapes, directly challenging traditional financial media platforms," X said when announcing the deal.

X's past efforts with video have yielded mixed results, but its setbacks have attracted the most attention. Paris Hilton dropped a content deal after raising concerns about antisemitic material on the platform. Tucker Carlson abandoned X to launch his own site. And Don Lemon's program was canceled following a tense interview with Musk.

After Musk acquired Twitter in October 2022, he pushed away major advertisers by firing safety and ad-sales teams, reversing bans on controversial accounts, and imposing erratic moderation policies. In 2023, Musk said the social-media site had seen a 50% drop in ad revenue.

Original programming could attract new audiences and win back advertisers.

"Where there's an investment in original programming, there will be an audience," says Brian Wieser, head of media consultancy Madison & Wall.

At the CES tech showcase in January, Yaccarino cited *Going Public* as an example of how creators can "find their people" on X. "We have a new show called *Going Public*," she said, "where you, the audience, can actually get involved, watch, and actually invest in companies."

This season of *Going Public*, its third, marks a new push for a mainstream audience by its creators. The first season of the show ran on Entrepreneur.com. The episodes no longer appear on the site.

Season two of *Going Public* ran as part of an advertising campaign hosted on MarketWatch.com. That content ran in a walled-off part of MarketWatch's site and was labeled as custom content—a designation for paid promotional material. (MarketWatch and *Barron's* are both owned by Dow Jones, a unit of News Corp.)

Dutch Mendenhall and Amy Vaughn, the founders of a start-up featured on "Going Public."

A Dow Jones spokesperson said the *Going Public* season was a one-time campaign under a routine sponsorship agreement. Dow Jones had no role in the content, she said. An Entrepreneur.com spokesperson didn't respond to messages about the show.

X includes the *Going Public* content on its new X Originals feed, without disclaimers.

"The legacy media has standards for the type of content they're going to share with their audiences," says Michelle Amazeen, a Boston University communications professor. "Social-media platforms have much less stringent standards, if any."

On a *Going Public* episode released last month—in advance of the funding-episode finale—Mendenhall shares his populist vision with World Series champ Sabathia for a golf course empire where people from all walks of life are invited to become fractional-stake club owners.

"My thing is, more Americans will own golf courses because of us, I believe, in the next 12 months than has existed in the entire history of America," Mendenhall says.

While touring OmniCo's first project, the Wentworth Golf Club near Tampa, Mendenhall tells Sabathia about the property's rundown state when he and Vaughn acquired it. "But that's what I've always invested in: the broken and the damaged," Mendenhall says.

Mendenhall's previous business, RAD, was organized as a real estate investment trust, a type of company that owns or finances property and—in return for paying most of its profits to investors as dividends—receives special tax advantages.

Most REITs are publicly traded, which means that their stock is bought and sold on public exchanges, with their share prices fluctuating according to investor demand.

RAD is part of a relatively small class of real estate companies known as nontraded REITs, which raise money by selling shares directly to investors through brokerages and

For personal non-commercial use only. Do not edit or alter. Reproductions not permitted.
To reprint or license content, please contact Barron's reprints department at 800-843-0008 or www.djreprints.com

financial advisors, rather than on open markets.

Since nontraded REITs aren't listed on a stock exchange, the companies themselves determine their share prices. They typically do this by totaling the appraised value of their real estate and other assets, subtracting liabilities, and dividing the result by the number of shares outstanding. Higher asset values, therefore, mean higher share prices.

RAD REIT shares rose 150% between October 2019 and July 2023, advancing even during the worst of the coronavirus pandemic, according to data on the company's website. The S&P 500 index appreciated about 47% over that period.

RAD's disclosed values didn't always reflect reality. In 2022, an article by this reporter in the Philadelphia Inquirer showed that some of the houses that RAD listed in disclosures as having soared in value over their purchase prices had badly deteriorated since RAD bought them. One apparently vacant row house with boarded windows in a depressed Philadelphia neighborhood was listed by RAD as generating $14,400 a year in rent.

RAD told the Inquirer that it works to "comply with all securities, licensing, landlord-tenant, and other applicable laws and regulations."

In recent interviews with *Barron's*, former employees said property values were inflated to fuel share price increases. RAD generated those valuation estimates itself, according to former employees, rather than hiring outside appraisers to set the value of individual properties, as is common among many nontraded REITs.

In 2022, after the SEC began probing RAD, the company's managers set up a now-defunct firm called Asset Evaluator and put RAD's recently retired loan-department chief in charge to rubber-stamp the inflated valuations, former employees say. Corporate filings and the LinkedIn profile of the retired executive, who has since died, corroborate the role change.

In February 2024, the SEC effectively blocked RAD from raising money from unaccredited investors, the firm's securities filings show. Former employees say RAD had failed to obtain a CPA-approved audit and other required financials. That same day, RAD filed a public notice informing investors that it was temporarily freezing their ability to exchange their shares for cash—a suspension that was later extended indefinitely.

The turmoil that followed the share-redemption halt was the latest wave of chaos in a long-disorderly workplace where raising money from investors consistently took precedence over managing it, former employees say.

The company never upgraded its primitive bookkeeping system, which relied in part on Google Sheets, even as online ad campaigns began pulling in exponentially more money and the business grew increasingly complex, the employees say.

Investors were routinely misled about how their money was being used. For example, funds accepted from individual participants in property-flipping ventures to renovate specific homes were often diverted to unrelated expenses, such as covering loan payments on other properties on the brink of foreclosure, according to multiple employees who worked in financial roles at the company.

Multiple former employees interviewed by *Barron's* say they're owed back pay and severance. Some say they discovered RAD hadn't remitted health and unemployment insurance premiums that it had withheld from their final paychecks.

As of last month, nearly 200 properties owned by RAD or an affiliate across Pennsylvania, New Jersey, Texas, Idaho, and Florida were in some stage of foreclosure, according to data provided by Attom. That accounts for about a third of its property holdings, according to *Barron's* calculations based on the Attom data.

On June 3, RAD's landlord at its Tampa headquarters secured an order for law enforcement to evict the company over nonpayment of rent since November, court records show.

For many investors, buying into the REIT after clicking on a social-media ad was merely a first step toward ever-deepening involvement with the company. Investors were soon also invited to join RAD's "Inner Circle," a "training-and-coaching" program that cost enrollees up to $50,000.

Inner Circle membership qualified investors to participate in "joint ventures," marketed as partial direct ownership in individual property flips. Inner Circle members were also approached to extend "hard money loans" to RAD, for which they were promised interest rates as high as 20%, with repayment beginning within months.

One investor alleged in a lawsuit, uncontested by RAD, that she purchased a partial stake in a property that the company later sold without informing her or providing her with any of the proceeds. The investor also alleged that RAD made no payments on a hard money loan she extended to the company, an experience echoed by investors interviewed by *Barron's* who made such loans.

David Ernst, a custodian at a public middle school in southeastern Massachusetts, says he was drawn to RAD by the soaring REIT stock price it boasted in its Facebook ads. He made a $30,000 investment in the REIT using funds that he transferred from his T. Rowe Price individual retirement account to a "self-directed" IRA, at RAD's instruction.

With the value of the REIT shares in the new account climbing, Ernst was emboldened to invest more. He took out a $100,000 home-equity loan, which paid for an Inner Circle membership and a $50,000 joint venture stake in a Tampa-area fix-and-flip project that he was told would bring him a big return within a year.

Three years later, the property still has not been sold. RAD Diversified owes more than $12,000 for the house in property taxes, for which it is two years delinquent, county records show.

"I've come to a conclusion that I'm not going to see any of this money," Ernst says. He says he was interviewed by an investigator with the SEC earlier this year.

Another investor, Kevin Mantell, a sales consultant for a home-improvement company in New Jersey, also says he's spoken with SEC investigators and is frustrated with the agency's apparent inaction.

The SEC had been aware of issues at RAD since at least 2021, when the agency received a whistle-blower complaint alleging that it was lying to investors about the value of its property holdings, according to the Inquirer. The complaint was submitted by Barry Minkow, a convicted fraudster turned self-styled whistle-blower, who gathered material for the report by pretending to be a potential investor.

"It's clear to me that the SEC has dropped the ball," says Mantell, who tallies his losses from RAD loans and investments at $200,000.

Mendenhall addressed the SEC probe in his April videoconference with top investors—a stalwart bunch known as the "One Percenters" for the 1% ownership that members were marketed in RAD Management, a Mendenhall-led firm that earns fees for running the REIT. He asked each participant to contribute $20,000 toward a multifaceted legal effort that would include a billion-dollar class-action lawsuit against the SEC for "what they did to us as an organization."

Mendenhall also assured participants on the call that a payout was on the way, when OmniCo Golf—the venture promoted on *Going Public*—takes full control of the Wentworth course.

"You'll be able to make choices with what you want to do with that cash," Mendenhall said.

One option: "Move forward into what I think is going to be a golf course fund that buys lots and lots of golf courses, which is pretty cool."

Mendenhall will get to make his pitch to a new set of potential investors later this month, live on X. B

Hall of Fame pitcher CC Sabathia and Dutch Mendenhall toured the Wentworth Golf Club in a recent episode of "Going Public."

Sherwin-Williams Can Paint Your Portfolio Green

The paints and coatings company looks especially resilient in a tough housing market. Its stock looks set to outshine its competitors.

Sherwin-Williams' quick delivery times and innovative paints that require fewer coats help lower contractors' costs.

BY TERESA RIVAS

A fresh coat of paint can transform a room. A fresh look at **Sherwin-Williams** stock can boost a portfolio.

The paint maker has been on a tear over the past year. Although the housing market remains difficult—many buyers remain priced out due to high interest rates, low affordability, and a shortage of supply, and sellers are left with lower prices—that hasn't stopped homeowners from painting, particularly when those pandemic-era shades start to look dated.

At the same time, several of Sherwin-Williams' erstwhile competitors have fallen by the wayside, leaving more market share for the Cleveland-based company. And paints and coatings are often made and sold locally in the U.S., providing some insulation from tariffs.

All told, the stock, at a recent $335.88, is up some 12% in the past 12 months outperforming the S&P 500 index by two percentage points. That's in part because, like a new hue on a cracked wall, tough times have only helped Sherwin-Williams shine.

"I still love Sherwin-Williams," says Joseph Ghio, an analyst at Williams Jones Wealth Management. "What continues to impress us is despite their end market remaining weak, Sherwin has shown the ability to protect margins and grow market share. While competitors slow down investment, Sherwin has stepped on the gas, increasing their new-store count growth and winning market share annually as competitors become bankrupt or divest their stores business."

If the Federal Reserve does lower interest rates—however modestly—in 2025, as many investors expect, Sherwin-Williams' earnings growth could pick up alongside home sales, even if lack of supply remains an impediment to a real boom.

"As interest rates decline, housing turnover and completions should return to normal growth, considering we are five million homes underserved in North America," notes Ghio. "Once rates stabilize and homes start to turn over and new homes are built, Sherwin has positioned themselves for rapid earnings growth." In addition, the company's quick delivery times, driven by logistics investments, and innovative paints that require fewer coats help lower contractors' costs.

That helps to explain the improving profit outlook for Sherwin. Analysts predict earnings per share will jump 11.6% year over year to $13.30 in 2026, after growing just over 5% this year.

The stock looks attractive even without a big rebound in housing, according to Andrew Choi, a portfolio manager at Parnassus Investments.

He believes that earnings can compound in the mid-to-high-teens over time because, while end-market demand may remain volatile, Sherwin-Williams is poised to reap the benefits of big investments in its business over the past two years. On the company's most recent earnings call, management reiterated that modernizing systems, expanding digital capabilities, and training the sales force are starting to yield efficiencies. Choi noted that there is evidence that these investments are contributing to margin expansion and market share gains, especially in the Paint Stores Group, which has outperformed a flat market and gained market share.

Ghio is similarly upbeat about the market share opportunity, after the company's primary competitor, **PPG Industries**, sold off its architectural coatings and silica businesses late last year, and smaller rival Kelly-Moore Paints ceased operations in January. "The constant demand is there and theirs for the taking," he says.

So is pricing power, with fewer options for do-it-yourself and enterprise customers alike.

"Big picture, the company's competitors are either exiting markets or distracted, while Sherwin-Williams has been investing consistently," says Choi. "This is aligned with their historical track record of market share gains."

The stock has always commanded a premium, so while its current valuation of just under 28 times forward earnings may not seem like a steal, it's not far above its five-year average.

Moreover, Choi notes, that earnings multiple includes nearly $2 per share of front-loaded selling, general, and administrative investments that haven't played out yet. Factoring that in means Sherwin-Williams' true 2025 earnings power is higher—about $14 a share—and its valuation around 24 times.

The question of tariffs is ongoing, but it doesn't appear to be as much of a problem for Sherwin-Williams as other chemical peers. Although its business could take an indirect hit from consumers and businesses taking a wait-and-see approach, multiple analysts have highlighted it in recent months as selling locally made products to customers, rather than relying on overseas supply chains.

Sherwin-Williams is looking to beef up its environmental bona fides too, with targets to get half of its electricity from renewable resources by 2030, along with reducing its greenhouse-gas emissions and waste disposal footprint.

Earlier this month, Morgan Stanley analyst Vincent Andrews reiterated an Overweight rating and $385 price target on the shares, writing that its revenue growth and margin expansion will be stronger than many expect, "which could further separate its earnings multiple from traditional paint and coatings companies and home improvement retailers." Instead, he argues, it could ultimately be valued like high-quality business services stocks **Cintas** and **Rollins**, which command forward price/earnings multiples of more than 40 times.

The stock's future returns look to be glossy. B

The ETF Fee War Is Over. You Can Still Get Burned.

BY IAN SALISBURY

This may be the end of the great mutual fund fee war. Investors are still benefiting from the relentless pressure that asset managers feel to keep costs low.

Investment fees are key when it comes to picking mutual funds, since every dollar in fees comes out of returns, and lower-cost funds have a long history of outperforming pricier options. Driven by the runaway popularity of exchange-traded funds, the industry has spent years competing to offer cheaper and cheaper options.

The race may be all but over, according to a new Morningstar report. Last year, the average asset-weighted fee for index funds stood at 0.11%, essentially flat with 2023. Still, that's much lower than a decade ago, when the average fee was 0.19%. Among active funds, average fees also held steady at 0.59% from 2023 to 2024. A decade ago, they were 0.78%.

Steady fees may be disappointing to investors used to seeing the fund industry fall all over itself announcing price cuts. "It is inevitable that the pace of fee deadlines will slow, prompting asset managers to look elsewhere for profits," wrote analysts Zachary Evens and Bryan Armour.

To be sure, fee cuts aren't completely dead. In June, Charles Schwab slashed fees on a handful of funds, such as the **Schwab 1000 Index** ETF (ticker: SCHK) and the **Schwab International Equity** ETF (SCHF), lowering their expense ratios to 0.03% from 0.05% and 0.06%, respectively.

Earlier this year, Vanguard also issued cuts across many of its funds, such as the **Vanguard S&P 500 Growth** ETF (VOOG), which went to 0.07% from 0.1%.

But with fees already so low, there are diminishing returns. On a $10,000 investment, a 0.1% expense ratio amounts to $10 a year, so the annual saving if that falls to 0.07% is just $3 per $10,000. Ultimately, picking the right mix of stocks and bonds will have a much bigger impact on your returns than chasing small differences.

What's more, it isn't clear investors would benefit from cutting costs below where they are today. A few firms, most notably Fidelity, offer mutual funds with expense ratios of zero. Still, there are potential downsides to this approach.

No fund is free to run. Zero expense-ratio funds are either subsidized by a fund firm's broader lineup or pay overhead through other sources of revenue, such as profits from securities lending. That revenue could otherwise be used to boost a fund's returns.

The good news for investors: The popularity of ultralow-cost index funds continues to motivate fund firms to keep costs as low as they can. Last year, mutual funds that were in the least expensive quintile in their category grabbed $930 billion in new investor dollars, while those in the most expensive quintile saw investors yank $250 billion.

"Investors overwhelmingly prefer cheap funds. It doesn't matter if it's active or passive," Evens tells *Barron's*.

Of course, Wall Street has been looking for ways to push back. More than 350 ETFs have launched in 2025. Plenty of them boast expense ratios of 1%, and sometimes quite a bit more. Consider the **Fortuna Hedged Bitcoin** ETF (HBTC), which charges 1.75%, or the **Brookmont Catastrophic Bond** ETF (ILS), with a fee of 1.58%.

Fund firms have given up trying to get customers to pay big fees for stock-picking, but they still hope that investors will cough up for more complicated, niche strategies, especially ones built around exotic financial instruments.

"The vast majority of strategies investors would want to own in the core of their portfolio are spoken for, so what you're seeing is a lot of ETF innovation around the edges," says Nate Geraci, investment advisor and president of the ETF Store. "There are much more complicated products coming to market, and much higher fee points. The bar for due diligence has been raised." B

Scoreboard: Temporary Truce

With May the inflation number low and trade talks with China continuing, U.S. stocks edged up, and the S&P 500 rose 1.78%, nearing a high. Gold slipped but natural resources funds rose over 5%.

INCOME INVESTING

While almost every other asset class has recovered this year, munis are still below April levels. Attractive opportunities remain.

Muni Bonds Are Still Cheap. Here Are the Best Ways to Buy In.

BY AMEY STONE

Blame it on supply. Muni Land has seen a flood of new issues this year, overwhelming otherwise healthy demand for tax-free bonds and leading to stagnant returns for investors.

"It's been raining bonds for weeks," says Brian Barney, who oversees management and trading of institutional bond portfolios for Parametric Portfolio Associates. Last year was a record year, with about $500 billion of issuance, and estimates are for $560 billion this year. One week in early June, muni issuance reached a record of $20 billion.

That flood of supply is a big reason that muni yields have remained at lofty levels even as virtually every other asset class—stocks, taxable bonds, crypto—has more than recovered from April losses. A broad-based index of munis is down about 2% in 2025. (Bond prices move inversely to yields.)

"Munis have stabilized but have not bounced back as much as other financial assets from post–Liberation Day volatility," says John Miller, who heads municipal credit at First Eagle, referring to the day that President Donald Trump announced reciprocal tariffs around the world and triggered a major selloff in stocks and bonds. "We've seen munis become more stable, but at a cheaper overall yield level."

• **High after-tax yields.** For investors, the good news is that there are plenty of opportunities to buy attractive, newly minted munis. Long-term munis are especially attractive at an average yield of 4.65% for triple-A tax-free issues, compared with a 30-year Treasury yielding 4.86%. High-income investors in high-tax states can earn income in their state's munis that is equivalent to 8% on a corporate bond after taxes are taken into account.

"People don't appreciate how steep the curve is and what an advantage they have if they go out past 10 years," says Jason Appleson, who leads muni investing at PGIM Fixed Income.

Consider bonds rated lower than triple-A credit quality that are still high quality, and you can get another 35 to 40 basis points of yield, says First Eagle's Miller. "A yield of 5.15% is pretty attractive and achievable in high-quality munis," he says. (A basis point is a hundredth of a percentage point.)

Appleson oversees the **PGIM Muni High Income** fund, which targets about half investment-grade and half lower-rated high-yield munis. It has an 8.6% taxable-equivalent yield.

• **Bonds versus funds.** Given interest-rate volatility this year, owning individual munis has appeal. "More people are comfortable owning individual bonds because they are tired of unexpected capital gains or losses in mutual funds, which may also be riskier in terms of duration and the credits they own," says Jeff Timlin, a tax-exempt fixed-income portfolio manager at Sage Advisory in Austin, Texas.

Parametric is a specialist in creating portfolios of individual muni bonds with staggered maturity dates, a strategy known as laddering. Since investors own the individual bonds to maturity, the portfolios provide predictable cash flow and the opportunity to harvest tax losses. Barney says Parametric can typically add about 30 basis points of alpha a year through harvesting tax losses. A Parametric ladder of high-quality New York munis that mature in 10 to 20 years yields 4.25%, or a taxable-equivalent yield for a wealthy New Yorker of 7.41%, for example.

"Ladders create a sense that if interest rates rise, investors can benefit by reinvesting at higher yields," says Miller. "That may help investors stay the course when rates rise." But he notes that most ladders are in the less attractive part of the yield curve (one- to 10-year maturities), where yields are more like 3%.

Miller's team at First Eagle plans to launch separately managed accounts of munis in July. "They are not as conservative or mechanical as a ladder, but still give investors predictable maturity dates," he says. "We're going to try to make it the best of both worlds."

Such accounts come with high minimums, so for investors with less than about $100,000 to invest in munis, a mutual fund or exchange-traded fund is a better bet. With a fund, "you get low cost and diversification," says Paul Malloy, head of municipal investment at Vanguard, which recently launched a series of muni ETFs.

PGIM's Appleson argues that investors still face interest-rate risk with individual bonds. "To think you don't have to worry about interest-rate risk is misleading," he says. "Your bond will still change in value" if rates rise. Funds offer greater diversification, access to all of the benefits of institutional trading, and professional management by expert teams. "What everyone wants is to have more dollars in their pocket, and I don't think that holding bonds to maturity is the best way to accomplish that," Appleson says.

• **Summer is coming.** The spring is traditionally a good time to buy munis, since issuance slows and many bonds mature or are called in the summer months, so supply-and-demand dynamics improve. This year has been different, due to the uncertainty created by the federal tax and spending bill making its way through Congress.

Earlier in the year, it looked like some munis could lose their tax-exempt status as legislators looked for ways to offset the costs of Trump's tax cuts. That kept some investors on the sidelines, crimping demand, at the same time issuers sought to get their deals done ahead of a potential change.

A change in munis' tax-free status is mostly off the table, but issuance continues to remain robust as local and state governments, as well as issuers in healthcare and higher education, anticipate needing extra funds to make up for cuts expected to hit areas of their budget. In addition, investors are generally worried that interest rates could rise due to higher deficits.

"We're working our way through this period of uncertainty, and we're getting closer to the end, and valuations are attractive," says Vanguard's Malloy. "Those things make this a very good point to enter the municipal market and enter for the long run." B

7 Newly Issued Municipal Bonds

These individual issues, which may not be accessible to all investors, represent the breadth of munis available, according to First Eagle.

Bond	Maturity	Current Yield	Taxable-Equivalent Yield*
Lafayette Charter Schools (La.)	2059	6.49%	10.6%
Mountain House Community Facilities District (Calif.)	2055	5.42	9.87
Southridge Public Improvement District (Texas)	2055	6.03	9.39
Oregon Single Family Housing	2050	5.07	9.34
Calif. Affordable Housing (non-AMT)	2055	4.97	9.05
Chicago General Obligation (Ill.)	2050	5.51	8.84
Roanoke College (Va.)	2055	5.75	8.50

Note: *Taxable-equivalent yield is the rate a taxable bond would have to earn for an after-tax yield equal to the muni. Rate here is shown for single investors in the 32% federal bracket in the state issued using Parametric's calculator.

Q&A

An Interview With Joseph Davis, Global Chief Economist, Vanguard

This Economist Won't Rule Out 9% Bond Yields

BY MEGAN LEONHARDT

Companies, consumers, and Federal Reserve officials are struggling to forecast U.S. economic trends over the next few months. But what will the economy look like in the next decade or two?

Joseph Davis, global chief economist at Vanguard and head of the firm's investment strategy group, takes on that mission impossible—or is it?—in his new book, *Coming Into View: How AI and Other Megatrends Will Shape Your Investments*, published on May 27 by Wiley.

Davis began with a simple exercise aimed at determining where the risks to the economy and financial markets would develop in the next several years. Eventually, he developed a full statistical model focused on how major trends will shape growth and financial markets.

Davis, a Vanguard veteran, sees the country entering a period marked by an economic tug of war between rising fiscal deficits, on the negative side, and the transformative effects of artificial intelligence, in the positive column. If AI lives up to expectations, he says, its benefits may offset funding pressures. If deficits dominate, that could mean high-single-digit interest rates and trouble for investors.

Barron's recently talked with Davis about his findings and the investment implications. An edited version of the conversation follows.

***Barron's*: You contend that the coming decades won't see predictable and relatively constant economic growth, inflation levels, and financial returns. What awaits us instead?**

Joseph Davis: The consensus is fairly off base. If you had asked me this two years ago, I would have been in the camp that said U.S. economic growth is going to be roughly 2% a year for the next three to five years, inflation is going to average roughly 2%, and 2% plus 2% equals 4%, the interest-rate assumption of the bond market.

However, when we apply our data-driven model, the odds are extremely low that this scenario—what I call the status quo view of the world—transpires. Our research is clear: There's an 80% probability that we're going to see material shifts in some combination of growth, inflation, and interest rates over the coming five to seven years.

Describe your model, please.

We developed it to analyze how technology, demographics, structural fiscal deficits, and globalization have shaped U.S. real gross-domestic-product growth, inflation, interest rates, and the stock market over the past 130 years, and how they will interact in coming years.

We incorporate all the forces that matter, from globalization and debt to demographics and technology, into one predictive economic model. What

"What we see is a tug of war between growing fiscal deficits...and the potential for artificial intelligence to boost growth. All other forces are secondary."

we see is a tug of war between growing fiscal deficits, on one side, and the potential for artificial intelligence to boost growth, on the other. All other forces are secondary.

What makes your model unusual?
It's a model, which means it has limitations. That said, I believe it is a step forward for the industry. We have integrated short-term economic fluctuations such as business cycles, long-term trends such as growth in technology or debt levels, and asset prices—so, stocks, bonds, interest rates. Believe it or not, these factors often are considered separately.

What the model revealed upended some of my economic assumptions. A simple example was the discovery that demographics don't materially drive inflation. Demographics and the aging of society don't move the dial nearly as much as rising permanent structural deficits or even the potential for technology and AI.

If demographics aren't destiny, are we worrying needlessly about the graying of America and the baby bust?
I wouldn't say needlessly, but it is a challenge that can be overcome and has been overcome a number of times throughout history. Population and demographics were weaker during periods such as the Renaissance, the industrial revolution, and the 1920s. I'm not saying that any citizen, country, or investor should cheer for a poor demographic profile, but it isn't the sole driver, and certainly not the primary driver of economic outcomes.

We have been aging as a species since we first walked on Earth. But in the U.S., we have tied some of our debt commitments to the aging of society. That is more recent, and that is where the demographics will really matter for the U.S., and for several other countries, in the next five or 10 years. But I would caution that some investors may be placing too much emphasis on demographics alone and not looking at the multivariate drivers that we know influence outcomes.

Artificial intelligence may be one. How transformational do you expect AI to be?
In our framework, we are modeling that the diffusion of potent general-purpose technologies—or what some call GBTs—will create shocks comparable to those we saw before, during, and after innovations such as electricity, the internal combustion engine, and the personal computer.

The economic drag created by the lack of automation and a valuable general-purpose technology will transition to become a modest boost as those technologies are adopted, although it will take time. There is about a 40% to 50% chance that we get as much as a one percentage point swing in economic growth projections from that alone—and that is noninflationary growth.

Why aren't the odds even higher?
It's early on. These technologies still aren't widely used. It's unclear what AI will do for automation and augmentation—meaning whether it will make us better workers, rather than just saving time. It's also unclear that it will lead to the creation of new industries and products. That was the game-changing difference with the personal computer and electricity, for instance. Our model is saying there are good odds it will, but they are only 40% to 50% right now.

If AI succeeds, you note in your book that value stocks, not technology companies, might outperform. Why?
There are generally two phases in technology and investment cycles. The first is what some would call the euphoric phase, when the new technology starts to spread throughout the economy and businesses. Usually, technology stocks do well during that period. Phase two is when the technology spreads and everyone is using it and it's multiplying and unlocking new business opportunities and new investments. In that second phase, you generally find that sectors outside of the original technology do the best.

During the first phase, there can be a vast period of underperformance. The very nature of transforming the economy means there is a tremendous amount of new capital being deployed to build the new field and harness its benefits. A lot of new entrants fail, although they generally reduce the price of that investment, which leads to its adoption by nontechnology companies, ultimately boosting the productivity of society at large. But that erodes the return on investment of the incumbents. We have seen this throughout history.

According to data from Stanford University, there have been over 5,000 AI companies funded in the U.S. alone over the past four years. That's more than all of the publicly traded U.S. companies. It may seem counterintuitive, but if AI turns out to be a big disappointment, value stocks will have a tailwind because they weren't bid up. If AI is really transformational, however, it will boost the profitability of everything outside of Silicon Valley, such as hospitals, companies, and banks. So, from both an offensive and defensive investment posture, it tilts you to value stocks.

It also explains part of the reason why growth stocks, in particular technology stocks, have outperformed in the past decade. It was due to the lack of transformative technology—and that's the irony. I wish I knew that information 10 years ago.

One of the other key findings in your research is the importance of the U.S. deficit. What are the economic implications of both rising U.S. government debt levels and the ongoing budget deficits?
Both debt and deficits are important, but deficits are what really matter—structural deficits. In fact, there is no correlation between debt levels and future economic growth. It is structural deficits that are correlated strongly with expected inflation and higher interest rates.

That may sound wonkish to some, but structural deficits are those that are recurring and growing over time, as opposed to temporary deficits such as those accrued during wars and recessions. The structural deficit has been growing in a bipartisan fashion, and structural deficits can modestly boost growth. They also increase long-term inflation expectations in our framework, which implies higher borrowing costs.

We find empirical evidence that structural deficits are adding to higher interest rates and driving the so-called neutral rate of interest [the rate that neither stimulates nor constricts economic growth]. There has long been talk about how structural deficits are an economic headwind and crowd out growth, although it's sometimes tough to see that in the data.

I wouldn't want to be alarmist, but if these deficits continue at a higher pace and AI does not prove transformative, in five to 10 years, there's approximately a 20% probability that the 10-year Treasury approaches 9%, with the average settling close to 7%. That is clearly an unsustainable dynamic in that scenario. This will not happen overnight, and technology would have to disappoint, but structural deficits can have negative consequences.

We aren't here to scare people. We're here to say, how do you navigate this? This is no longer a tail risk that investors or policymakers can worry about another day. They have to start seriously thinking about our deficit situation.

Are we at an inflection point, or have we passed it already?
We are entering that territory, but again, I don't want to be alarmist. Things aren't going to come to a head this year. We aren't going to 7% interest rates tomorrow, and we may never go there. At the same time, I'm trying to talk to policymakers to say this is a more serious issue than perhaps they may appreciate.

How should investors be positioned in light of this risk?
It's about finding a form of risk management that tries to get as much of the upside should AI prevail, while minimizing the downside should deficits dominate. This isn't so much about being "tactical" or "smarter than the market" but trying to harness risk management in a portfolio.

Thank you, Joe. B

Israel-Iran Conflict Is a Setback on The Path to S&P 7000

BY JACOB SONENSHINE

War is hell, but Israel's attack on Iran doesn't change the fact that the stock market looks intent on trading at a new high—and then some.

Yes, the S&P 500 index dropped 0.4% this past week, while the Dow Jones Industrial Average fell 1.3% and the Nasdaq Composite was down 0.6%. Still, all three indexes had been heading for gains before Friday's early-morning attacks on Iran's nuclear facilities, and the S&P 500 managed to hold support above its 20-day moving average, an indication that even short-term traders hadn't gotten too worked up about the conflict. The index, at 5976, needs to gain only another 2.8% to reclaim its record close of 6144, hit in late February.

The possibility of further escalation still looms, of course. The attacks sent the price of West Texas Intermediate crude oil, the U.S. benchmark, up 8.3%, to $73.70, amid fears that the situation could escalate. The worst-case scenario: Iran closes the Straits of Hormuz and other Middle East oil producers get dragged into the conflict, according to J.P. Morgan strategist Natasha Kaneva. That could push oil prices to $120 to $130 a barrel—and send inflation higher. She puts a 17% chance on that scenario playing out.

"While the initial attack avoided energy targets, the Israeli offensive could extend over several days, with Iran vowing to retaliate, potentially having a significant impact on global energy markets," Kaneva writes.

Tensions don't have to worsen, however. Iran knows that if it retaliates by targeting oil installations, the U.S. would get involved. And the war would have to have an impact on earnings, inflation, or real interest rates for the S&P 500 to suffer a sustained pullback, according to 22V Research strategist Dennis DeBusschere. If the rumblings don't turn into all-out war, the price of oil may move lower. Even if it remains at this level, it probably won't have a major impact on broader inflation. "Markets will stabilize," he writes.

They often do. Since 1985, the S&P 500 has averaged a 3.6% gain during

the three months after oil rises 5% or more in a single day, according to Dow Jones market data.

Now it's up to the economy and earnings. Thankfully, spending by consumers and tech companies like **Meta Platforms** and **Alphabet**, perhaps the two of the most important pillars of the U.S. economy, grew during the first quarter and shows no signs of slowing down despite the trade-policy chaos. As a result, analyst forecasts suggest that aggregate earnings for the S&P 500 should grow 12% annually for the next three years, reaching $336 by 2027, according to FactSet. At 21 times earnings, the S&P 500 could hit 7000 by the end of 2026.

But let's not get ahead of ourselves. The index still has to trade to a new high, something that would be easier to do if it can surpass 6079, a key technical level, according to the DeMark indicator, which tries to identify changes in the direction of price before they happen, says Fairlead Strategies' Katie Stockton. If it can retake that level, it indicates that something has changed for the better—and that the S&P 500 will return to its record-breaking ways.

Even if it has to battle to get there.

6 Promising Small-Caps

Small-company stocks are mounting another comeback—but there are better ways to play them than the Russell 2000.

The small-cap index, whose members have an average market value of about $4 billion, has gained 21% from its April low, outpacing the S&P 500's 20%. The entire market got a boost when President Donald Trump rolled back the most onerous tariffs, ending the market panic caused by fears of a sudden stop in the U.S. economy.

The tariff rollback has been a particular boon for small-cap stocks, which are more economically sensitive than their larger peers and have had more to gain on the rebound. While the S&P 500 only needs to rise 2.8% to reach its record hit earlier this year, the Russell still needs to gain another 16% to reclaim its 2442 high, touched in November, giving it more room to run.

There's reason for some caution, however. The Russell has seen many brief periods of outperformance versus the larger, more stable S&P 500 in at least the past five years, but it can never seem to gather enough momentum to sustain the move.

After a short rally late last year, the Russell ran out of steam at a price that was just a few points above its previous high set in late 2021. That suggests that while small-caps could outperform in the short term, they're not a long-term bet.

"In our book, U.S. small-caps are now an occasional tactical trade, while large-caps are a core holding," writes Nicholas Colas, co-founder of DataTrek Research.

While betting on small-caps as a group may be just that—a bet—there are individual stocks that look attractive, particularly with the Russell 2000 trading at just an 11% premium to the S&P 500, down from its 30% average, according to Evercore ISI data.

The firm's analysts screened for small-caps that are in the highest quintile of profitability based on net profit margins and return on equity. That allows them to avoid the many money-losing companies in the index and find those that have the pull with customers to lift prices to offset tariff-related costs and protect their profit margins. They also looked for companies in the top quintile of sentiment based on the change in analysts' sales and earnings estimates in the past three months.

Stocks that made the cut include Chili's owner **Brinker International**, LaCroix sparkling-water maker **National Beverage**, real estate investment firm **Cohen & Steers**, data protection software provider **Commvault Systems**, and digital lender **Enova International**.

Another is $5.1 billion egg producer **Cal-Maine Foods**. The stock, at $96, is down 17% from its January record high

of $116, when the market realized that egg prices, which had surged because of bird flu, couldn't remain at those levels forever. Shares now trade at 10 times earnings, down from a peak this year of just over 12 times, even though sales and earnings estimates have only risen.

The stock now looks cheap—and set up for gains. Analysts lifted egg price estimates for years, but lowered them last year as prices came back down to earth. They have since jumped. Sales estimates are up 47% since October, according to FactSet, driven by price expectations and increased volume.

Cal-Maine also pays what looks to be a reliable dividend, covered by an expected $600 million of free cash flow. The dividend yield is over 5%.

Good things can come in small packages.

Schwab on the Rebound

Charles Schwab's stock has recovered much of its loss from its "cash sweep" issue. Shares could reach a new record high soon.

Nearly a year ago, that idea might have seemed laughable. In July 2024, Schwab was the target of a class-action suit that claimed the firm's cash-sweep program offered ultralow yields that kept the company's costs down but underpaid investors. Suddenly, customers were moving billions of dollars out of those programs and into some of Schwab's higher-yielding money-market funds—or to its competitors, including Vanguard and Fidelity.

Without this cheap source of funds, Schwab's costs rose and earnings fell. Its stock dropped 17% in about a week in July 2024, marking the start of a period of intense turmoil. At $61, its low hit last August, shares were down 36% from their record high of $95.53, hit in early 2022.

Schwab stock has quietly rebounded. Driving it back upward has been this year's earnings-per-share estimate, which jumped to $4.31 from a low of $3.82 in October. To do so, Schwab focused on paying down debt, lowering its interest expense in the first quarter to $1.05 billion from $1.7 billion in last year's second quarter, and on increasing its profitability—net interest margins, the percentage of interest revenue Schwab keeps as profit, have steadily climbed. At $87, shares are just 8% below their all-time high.

It's enough to make one Schwab bear less bearish. In upgrading the stock to Neutral from Sell this past week, Redburn Atlantic analyst Charles Bendit noted that the cash-sweep and interest cost problems are finally dissipating. He isn't bullish—his $82 price target suggests a 7.2% decline in the stock—but there's reason to think his target may be conservative. The dynamic of a headwind turning into a tailwind is common to recovery stories, and Schwab is now essentially a growth story.

Analysts forecast annual sales growth of 8% through 2030. While Schwab's brokerage and wealth management businesses are expected to grow more moderately, its net interest income should grow by 9% annually and reach $17.3 billion by 2030. It should also get a boost from making more margin loans to traders, while its "net new assets," which have recently accelerated—reaching $130 billion in the first quarter after dropping by $75 billion in last year's second quarter—should continue to grow. Combined, these factors can drive earnings up 17% annually, to just over $9 per share by 2030.

The stock, at 18.9 times 12-month forward earnings, trades in line with its five-year average but below its recent peak of 22 times, reached in November, and the 24.6 peak before the cash-sweep issues began in 2022. That leaves plenty of room for expansion, which could provide even more room for upside in the months ahead.

It's fair to say that Schwab is back. B

Singapore's Pause on Crypto Could Help Rivals

BY CRAIG MELLOW

The U.S. is rushing to embrace crypto finance, with bipartisan support for enabling legislation known as the Clarity Act and the Genius Act, and President Donald Trump sponsoring his own memecoin. Singapore, an early and successful adopter of crypto among global financial centers, is meanwhile tapping the brakes.

On June 6, the Monetary Authority of Singapore announced new licensing requirements for "digital token service providers" targeting customers outside the city state. It gave them until June 30 to comply, warning that it "will not generally issue a license." The regulator's reason: "Money laundering risks are higher in such business models."

The move sounds more draconian than it is, argues Chengyi Ong, head of Asia-Pacific policy for industry watcher Chainalysis. More than 30 crypto operators are licensed in Singapore, including A-players like **Circle Internet Group** and **Coinbase Global**. "The regulators imagine that only a small sliver of the ecosystem will be affected," Ong says.

Tone is important in the fast-evolving crypto-sphere, though, says Hagen Rooke, a Singapore-based partner at law firm Gibson, Dunn & Crutcher. "Singapore is signaling that crypto is not a strategic priority," he comments. "It's mainly focused on all the risks."

Singapore started out in 2020 with a "relatively light-touch regulatory regime," codified by its Payment Services Act, Ong says. Attitudes hardened during the "crypto winter" of 2022. The nation of six million was "particularly affected" by that year's cascading scandals, Rooke notes. Sovereign-wealth fund Temasek Holdings was an investor in FTX, symbol of the era's excesses. Singapore-based crypto hedge fund Three Arrows Capital blew up, taking $10 billion in customer assets with it.

Singapore's tightening may spell opportunity for rival crypto centers, particularly the United Arab Emirates, which has been flinging down the red carpet for industry high rollers. Eric Trump headlined the Token2049 conference in Dubai last month, which drew 10,000 attendees. Neighboring Abu Dhabi, via its MGX wealth fund, lately invested $2 billion in Cayman Islands–domiciled Binance, a digital assets heavy hitter that has failed to win a Singapore license.

"People are gong back to the Middle East," comments Sheila Warren, chief strategy officer at Project Liberty, which studies the impact of digital systems on consumers.

In Asia, Singapore has one predictable competitor for crypto business, Hong Kong, and potentially one less predictable one, Japan. Tokyo recognized Bitcoin as a legal form of payment back in 2016 and plans next year to formalize digital assets as regulated financial instruments. "The main thing holding them back is taxation," Warren says.

Cryptocurrency gains count as "miscellaneous income" in Japan, meaning taxes up to 55%. The governing Liberal Democratic Party is pushing for the standard capital gains rate of 20%.

The awakening giant of global crypto is, of course, the U.S. "Our clients are falling all over each other to figure out how to enter the U.S.," Rooke says.

Well thought-out regulation from Washington would boost digital assets globally, not suck business away from smaller centers, Chainalysis' Ong thinks. "This is not a zero-sum game," she says. "A pro-crypto posture in the U.S. is fueling interest around the world."

Nor does she expect a global regulatory race to the bottom. Singapore's rhetoric may have turned cautious and Dubai's, rah-rah, but all have absorbed the harsh lessons of 2022. "Jurisdictions are not trying to compete on the laxness of their regimes," Ong says.

The next move is Washington's. B

THE STRIKING PRICE

Investors who want to insulate themselves from Trump's market impact can employ a one-by-two put option spread while selling call options.

Tesla Has Lost Its Trump Bump. How to Play It Now.

BY STEVEN M. SEARS

No eternal friends. No eternal enemies. Only temporary alliances.

This framework for navigating Washington offers investors a way to think about **Tesla** now that its founder, Elon Musk, has fallen from President Donald Trump's favor like a rocket tumbling back to Earth.

When the world's wealthiest man and the world's most powerful man were like Bert and Ernie, the electric car maker's stock enjoyed a Trump bump. Musk was da Vinci reincarnated, applying his genius to solving America's hardest problems.

And then their friendship soured. When their social-media war erupted on June 5, Tesla's stock value plunged by $152.4 billion. The amount is so large as to almost defy comprehension, but it exceeds the market capitalizations of **Danaher**, **Deere**, and **Applied Materials**—indeed, most of the world's companies.

Tesla's price volatility is the first case study of Trump's power over stocks that he has endorsed, or that Wall Street thinks will prosper from his policies.

This connection between specific stock prices and a president is unprecedented. Many investors are trying to harness the phenomenon; others are passively benefiting by owning stocks like **Palantir Technologies**, whose data analytics are often used for political purposes.

Tesla's experience demonstrates that Trump is the world's most powerful investment analyst. His ratings, which take the form of social-media posts and media comments, move stocks with unprecedented power. Yet those orbiting Trump's investment universe should contemplate the fleeting nature of a presidential Buy rating and the impact of investor positioning on favored stocks. There are ways to manage the Trump halo.

Palantir seems like an obvious at-risk stock, but the company has successfully navigated Washington for so long that its executives are unlikely to be banished. Besides, it's an integral part of the military and intelligence communities. Tesla lacks those qualities, suggesting shares will continue to be the physical manifestation of Musk's presidential conflict.

Investors who want to insulate themselves from Trump's market impact can employ a one-by-two put option spread while selling call options. The strategy is intended to offset stock declines while positioning investors to buy more stock at lower prices. It expresses a belief that presidential stock favor is a type of financial volatility that creates defined trading ranges.

Consider Tesla as an example of how investors might maneuver in this rough frontier of power and pomp. If Trump uses his immense power to punish Musk, Tesla's stock will almost certainly suffer. Shares are already down 19% this year, though still up 83% over the past 12 months. During the past 52 weeks, Tesla has ranged from $176.92 to $488.54.

With Tesla's stock at $325.31, investors could buy an August $315 put and sell two August $275 puts for about $1.85. The hedge is worth a maximum profit of $38.15 if Tesla's stock is at or below $275 at expiration.

The hedge can be complemented by selling an August $400 call for about $14.40. Should the stock stay below $400, the call premium is kept. Above $400, you can sell the stock into strength, which is probably prudent until Tesla demonstrates that it should be viewed on its own merits and not as presidential jetsam.

If our assessment is accurate, the strategy will generate income and offset some losses. If we're wrong, the call can be covered, and any loss can possibly offset gains elsewhere.

Still, it's hard to imagine Trump letting Musk enjoy too much adulation, which is why Tesla should be considered a rangebound prisoner in a presidential penitentiary that is awaiting a pardon. B

INSIDE SCOOP

MicroStrategy Insiders Buy Up Preferred Stock

BY ED LIN

Four **MicroStrategy** insiders paid a total of $1.3 million to buy into the company's latest offering of preferred stock on June 6.

A big holder of Bitcoin, MicroStrategy offered an 11.75% dividend yield on its new junior preferred shares, priced at $85 each, below the face value of $100. There was strong investor demand at the discounted price, and MicroStrategy sold about 11.8 million shares, raising $980 million after underwriting expenses and other deal fees. The deal had been originally set at 2.5 million shares.

Among insiders, the buying was led by director Jarrod Patten, who paid $425,000 for 5,000 of preferred MicroStrategy shares, according to a form that he filed with the Securities and Exchange Commission. Patten is the CEO of a consulting firm, RRG, and has been on MicroStrategy's board since 2004.

MicroStrategy didn't respond to a request to make the insiders available for comment.

President and CEO Phong Le paid $382,500 for 4,500 of the preferred MicroStrategy shares. Le also sold 5,295 common shares on June 6 through a so-called Rule 10b5-1 trading plan for $2 million, or $374.54 each. Insiders use such plans to remove the appearance of bias from the knowledge of nonpublic information. The plans automatically execute trades when preset conditions, such as price, volume, and timing, are met.

General Counsel Wei-Ming Shao paid $299,795 for 3,527 preferred MicroStrategy shares, and his trading plan sold 1,701 common shares for $637,100, an average price of $374.54 each.

Chief Financial Officer Andrew Kang paid $191,250 for 2,250 preferred MicroStrategy shares, and his trading plan sold 1,877 common shares for $703,000, or $374.54 each. B

Four MicroStrategy insiders, including President and CEO Phong Le, bought junior preferred shares in the company's recent offering on June 6.

Snowflake Chairman Plans to Sell Over $600 Million of Stock

Snowflake's former CEO and current chairman, Frank Slootman, plans to sell more than $600 million worth of the cloud company's hot stock.

Shares have surged nearly 40% so far in 2025. Snowflake has been reporting strong quarterly earnings this year, bolstered by strong enterprise demand for artificial intelligence.

Slootman adopted a Rule 10b5-1 plan on March 26 to sell 3,024,562 Snowflake shares, the company disclosed in a May 30 form that it filed with the Securities and Exchange Commission.

Snowflake didn't make Slootman available for comment on his plan, and the company declined to comment. Slootman's plan hasn't sold any shares yet, and an earlier plan remains in effect through June 30.

Based on a recent price of $210.84, the shares covered by Slootman's new plan are valued at $638 million.

The actual number of shares sold through the plan, which expires at the end of 2025, will differ due to the withholding of some shares for tax obligations, and the rounding of shares from the vesting of restricted stock units. B

Activist Filings

Cannae Holdings (CNNE)
Carronade Capital Management disclosed a new position in the principal investment firm of 3,189,027 shares. Carronade purchased 138,752 of those shares from April 28 through June 3, 2025, at per share prices ranging from $18.01 to $19.03. On Dec. 19, Carronade delivered a letter to Cannae's board, highlighting that the company has suffered from "prolonged share price underperformance" and nominating a slate of director candidates, including Mona Aboelnaga, Benjamin C. Duster IV, Dennis A. Prieto, and Cherie L. Schaible for election to the board at the 2025 annual meeting. Following those purchases, Carronade owns 5.2% of Cannae's outstanding stock. Shares of Cannae have remained mostly flat in 2025.

Increases in Holdings

Shenandoah Telecommunications (SHEN)
ECP ControlCo raised its stake in the telecom firm to 6,208,915 shares. ECP ControlCo did so through the purchase of 203,353 Shenandoah shares from May 27 through June 5, 2025, at per share prices ranging from $11.91 to $13.19. Following the latest purchases, ECP ControlCo continues to own 10.6% of Shenandoah's outstanding stock. Shares of Shenandoah have gained roughly 12.9% in 2025

Decreases in Holdings

DigitalOcean Holdings (DOCN)
Access Industries reduced its stake in the enterprise cloud computing platform to 22,368,945 shares. Access Industries did so through the sale of 3,496,504 DigitalOcean shares through an unregistered block sale on June 4, 2025, at a price of $28.60 per share. Following the latest sale, Access Industries continues to own 24.6% of DigitalOcean's outstanding stock. Shares of DigitalOcean have lost approximately 15.4% since the beginning of this year.

Kinetik Holdings (KNTK)
ISQ Global Fund lowered its stake in the midstream energy services company to 24,169,892 shares. ISQ Global Fund did so through the sale of 4,262,090 Kinetik Holdings shares on June 4, 2025, at a price of $44.16 per share. Following the latest sales, ISQ Global Fund continues to own 27.5% of Kinetik Holdings' outstanding stock. Shares of Kinetik Holdings have lost 24.1% since the beginning of this year.

American Public Education (APEI)
325 Capital reduced its stake in the for-profit education provider to 1,551,748 shares. 325 Capital did so through the sale of 607,551 American Public Education shares from May 30 through June 6, 2025, at per share prices ranging from $27.96 to $29.45. Following the latest sales, 325 Capital continues to own 8.6% of American Public Education's outstanding stock. Shares of American Public Education have gained approximately 28.7% since the beginning of this year.

These disclosures are from 13Ds filed with the Securities and Exchange Commission. 13Ds are filed within 10 days of an entity's attaining more than 5% in any class of a company's securities. Subsequent changes in holdings or intentions must be reported in amended filings. This material is from June 5 through June 11, 2025. Source: **VerityData (verityplatform.com)**

Could War Push Oil to $120?

Articles
ING
think.ing.com

June 13: An elevated level of geopolitical uncertainty requires energy markets to price in a large risk premium given the potential for supply disruptions. The strikes on Iran initially saw oil prices rally 13%, although markets have given back some of these gains. In the absence of any actual supply disruptions to Iranian oil flows, we suspect the rally will continue to fizzle. However, the market will need to price in a larger risk premium than it was prior to the attacks, at least in the short term, leaving Brent to trade in a $65 to $70-a-barrel range.

Any escalation that leads to a disruption in Iranian oil flows will be more supportive for prices. Iran produces roughly 3.3 million barrels a day of crude oil and exports in the region of 1.7 million barrels a day. The loss of this export supply would wipe out the surplus that was expected in the fourth quarter of this year and push prices towards $80 a barrel. However, we believe prices would finally settle in a $75 to $80-a barrel range. OPEC sits on five million barrels a day of spare production capacity and any supply disruptions could prompt it to bring this supply back onto the market quicker than expected.

A more severe scenario is if escalation leads to a disruption in shipping through the Strait of Hormuz. This could impact oil flows from the Persian Gulf. Almost a third of global seaborne oil trade moves through this chokepoint. A significant disruption to these flows would be enough to push prices to $120 a barrel. Under this scenario, we would need to see governments tap into their strategic petroleum reserves, although this would only be a temporary fix.

—Warren Patterson and team

Jobless Claims: Still Elevated

AM Charts
BMO
bmo.com

June 13: U.S. initial claims [for unemployment insurance] were unchanged in the latest week at 248 000, one of the higher levels of the past two years. However, more of an eyebrow-raiser was the 54,000 jump in continuing claims (the most in nearly two months), to 1,956,000, a number not seen since early 2018 (outside of the pandemic). This signals the longer time it is taking for those out of work to find a job.

The rise in continuing claims falls in line with some of the more dovish data of late, including May inflation (both consumer and producer). This could add more pressure for Federal Reserve Chair Jerome Powell to lower interest rates.

—Olivia Yong

The Case for EM Bonds

Daily Insights
BCA Research
bcaresearch.com

June 10: BCA's Emerging Markets strategists argue that a global macro shift is under way: A weaker U.S. dollar will drive a retrenchment in U.S. domestic demand and imports. Unlike previous cycles, dollar depreciation will be deflationary for the rest of the world rather than reflationary. This dynamic marks a structural change in the global policy mix and trade flows.

Against this backdrop, emerging market local-currency government bonds offer superior risk-reward relative to EM credit or equities. A bearish dollar outlook supports increased exposure to EM domestic debt. Our strategists recommend staying long local bonds in Mexico, Argentina, Peru, Korea, Malaysia, India (currency-hedged for now), Central Europe, and China. Within an EM local bond portfolio, they suggest underweighting Brazil, Colombia, and South Africa.

—Felix-Antoine Vezina-Poirier

Too Many Payroll Revisions

Hermann Review Industry Level Nonfarm Payrolls
Herrmann Forecasting
tlk77d@gmail.com

June 9: The Bureau of Labor Statistics has been overcounting monthly private-sector nonfarm payroll growth. Private-sector payrolls for the 12 months through March 2024 were revised lower by near 635,000 on Feb. 7, 2025. Furthermore, the latest QCEW [Quarterly Census of Employment and Wages] report showed that (on June 4) private-sector nonfarm payrolls continued to be "overcounted" for the months of April through December 2024, with risk of a cumulative downward revision of near -800,000 for December 2024!

> "If escalation [against Iran] leads to a disruption in shipping through the Strait of Hormuz, this could impact oil flows from the Persian Gulf....A significant disruption to these flows would be enough to push prices to $120 a barrel." **Warren Patterson and team, ING**

The "overcounting" of private payrolls has continued even as recently as the winter-spring months of 2025. For the months of January through April 2025, private-sector nonfarm payrolls have been revised lower (so far) by an average downward revision of -45.25K per month!

In other words, the U.S. economy may be closer to a slowdown than the current payroll figures suggest. We value (and we would hope the Federal Open Market Committee values) the data and analysis of the BLS, and the BLS' work is essential to our own efforts to predict the economy and calibrate the implications of those predictions to other areas of interest. Speaking only for ourselves, we would greatly benefit from a more accurate initial reading of the data—although we readily acknowledge that such an effort is a challenging exercise!

—John Herrmann

Small-Caps Set to Rally

Macro Note
Evercore ISI
evercoreisi.com

June 13: The shift in market sentiment from postelection animal spirits to trade war gloom earlier in the year—culminating in historic Liberation Day tariffs plunging stocks into a cyclical bear market, interrupting the structural bull—was especially pronounced for small-caps.

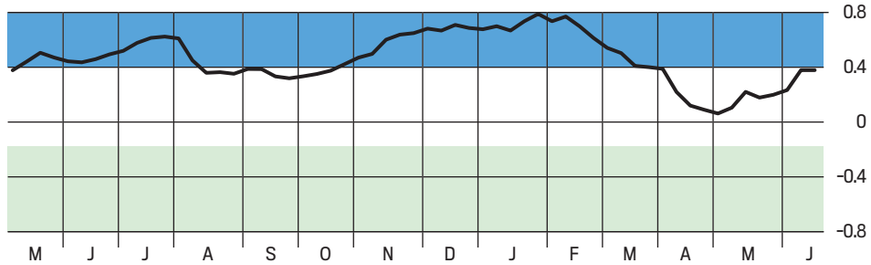
Determined by investors to be less resilient to tariff-related costs and uncertainty, the Russell 2000 reversed from leader to laggard, and the Small Size factor saw its sixth-worst year-to-date [performance] through May since 1990, extending the worst streak of underperformance since the dot-com era.

Yet, with trade uncertainty having peaked, have universally unloved small-caps become "So Bad, They're Good?" Tactically, cratered sentiment intersects with favorable June seasonality, when the Small Size reliably outperforms, aligning with the annual Russell Index rebalance. History suggests this trend will be amplified in 2025.

—Julian Emanuel and team

Market Sentiment

Citigroup Panic/Euphoria Model **Last** +0.33 ● Euphoria ○ Neutral ● Panic



The panic/euphoria model is a gauge of investor sentiment. It identifies "Panic" and "Euphoria" levels which are statistically driven buy and sell signals for the broader market. Historically, a reading below panic supports a better than 95% likelihood that stock prices will be higher one year later, while euphoria levels generate a better than 80% probability of stock prices being lower one year later.

NEW YORK STOCK EXCHANGE COMPOSITE LIST

BARRONS.COM/DATA

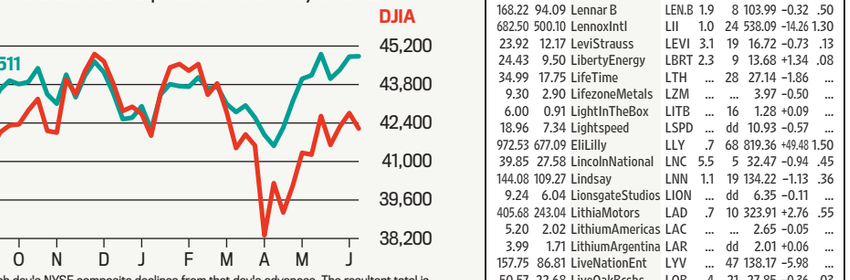
NYSE Cumulative Daily Breadth vs DJIA

Heroes and Villains: NYSE Composite breadth rose for a third week, even as the S&P 500 declined 1.1% when hostilities resumed between Israel and Iran. Losing NYSE stocks outpaced winners by 3 to 2.



In generating this chart, we subtract each day's NYSE composite declines from that day's advances. The resultant total is added to the next day's total, and so on. When all five days' numbers are added together, this produces the weekly figure we plot. Dec. 31, 1985 =1000.

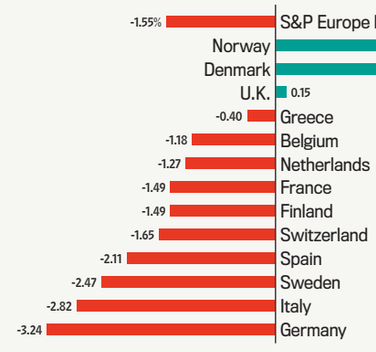
FOREIGN MARKETS

Europe

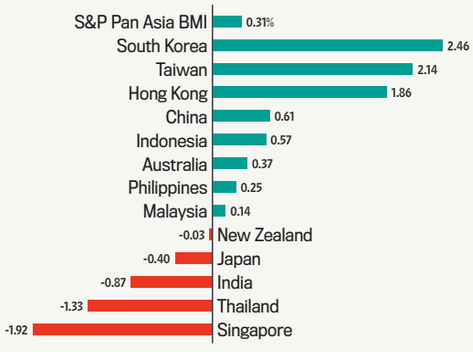
Playing Defense: Mideast conflict raised oil prices. Europe's stocks sank, but defense shares cushioned the UK.



Indexes based on S&P Global Broad Market Indices

Asia

West Wind: Early gains from the U.S.-China trade talks were reversed after Israel bombed Iran.



Source: S&P DJ Indices

DATA **MUTUAL FUNDS** DATA PROVIDED BY LIPPER BARRONS.COM/DATA

About Our Funds
The listings include the top 2500 open-end funds by assets. These funds value their portfolios daily and report net asset values (the dollar amount of their holdings divided by the number of shares outstanding) to the National Association of Securities Dealers. Total returns reflect both price changes and dividends; these figures assume that all distributions are reinvested in the fund. Because Lipper is constantly updating its database, these returns may differ from those previously published or calculated by others. 3 year returns are cumulative. The NAV is the last reported closing price for the week. Footnotes: NA: not available. NE: performance excluded by Lipper editor. NN: fund not tracked. NS: fund not in existence for whole period. e: ex capital gains distributions. f: previous day's quote. n: no front- or back-end sales charge. p: fund assets are used to pay marketing and distribution costs (12b-1 fees). r: fund levies redemption fee or back-end load. s: stock dividend or split of 25% or more. t: fund charges 12b-1 fees (for marketing and distribution) and a back-end load. v: capital-gains distribution may be a return of capital. x: ex cash dividend.

U.S. Dollar Index vs Euro and Yen

War Currency: Traders remained cool to the dollar for most of the week. It regained a bit of ground Friday, after Israel attacked Iran and America's currency seemed a safe place to some. Still, the dollar fell 1% on the week, measuring it against the basket of six currencies underlying the ICE U.S. Dollar Index.

Arms Index

The Arms index, also known as the short term trading index, is a number derived by dividing one quotient into another quotient. The numerator in the index is the number of advancing stocks divided by the number of declining stocks. As of 3/14/11, the denominator in the index is now the composite volume of advancing stocks divided by the composite volume of declining stocks.

Delta Market Sentiment Indicator

The Delta MSI measures the position of a representative set of stocks relative to an intermediate-term moving average crossover (MAC) point. When greater than 50% of the stocks followed are above this MAC point, the market is bullish. When the indicator is below 50%, risk is elevated and stock exposures should be reduced. Manager uses discretion on asset allocation when MSI is at 50% +/- 3%.

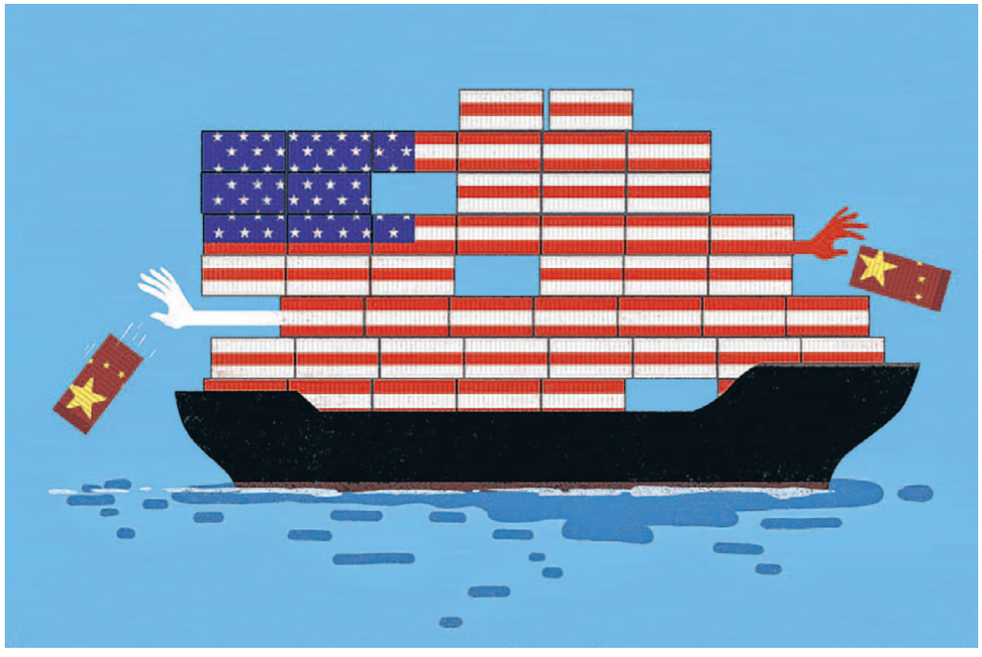
OTHER VOICES

Trying to asphyxiate China isn't going to end well. It isn't about ideological compatibility or strategic competitiveness, but realpolitik.



The Real Trade Fight Isn't About Exports

BY MARC CHANDLER
The writer is chief market strategist at Bannockburn Global Forex, a division of First Financial Bank.

U.S.-China trade talks are focused on export controls and tariffs, but at a deeper level they are about the future of the Pax Americana formed after World War II. A corporate-driven globalization emerged as businesses adapted to U.S. hegemony, currency dominance, and protectionism. At stake now is whether China can follow the same path as the U.S., even while the American public begins to rebel against that model.

Pax Americana transformed global commerce through a distinct form of economic integration built on foreign direct investment, transfer pricing, and intrafirm trade—the movement of components, services, and intellectual property among subsidiaries of the same corporation. As Europe and Asia rebuilt, U.S. companies found their exports threatened by a strong dollar and foreign protectionist measures. Their solution was to invest directly in foreign production facilities. Illustrating this shift, **General Motors**, **Ford Motor**, and **IBM** established manufacturing operations throughout Western Europe, reducing exchange-rate challenges and trade barriers while maintaining corporate control. This approach prioritized ownership over traditional trade.

It also necessitated intrafirm trade. Today, about a third of global trade flows within unified corporate networks rather than among independent entities, forming the hidden circulatory system of modern capitalism.

GM exemplifies this trend. Components designed in Michigan are manufactured in Ontario, assembled in Mexico, and distributed throughout North America. What would have been exports in earlier eras now move invisibly within GM. This operational flexibility is a structural resilience that export-focused firms cannot fully replicate, particularly in periods of exchange-rate volatility. The champions of corporate globalization have effectively insulated themselves from currency fluctuations.

Popular narratives about globalization focus on companies chasing cheap labor overseas. The evolution toward direct investment follows a more sophisticated logic. Most U.S. foreign direct investment flows to other advanced economies—Germany, Japan, the United Kingdom, and Canada—rather than low-wage destinations. These investments prioritize proximity to customers, market access, technological ecosystems, and stability.

This intrafirm trade created a governance challenge. How to price the transactions of transferring goods, services, and IP among related entities across different tax jurisdictions? The answer was transfer pricing, which determines the value of these internal flows, effectively distributing profits across national boundaries but within corporate structures. The arm's-length principle requires related entities to price transactions as if they were independent parties, though it struggles with the subjectivity of valuing intangible assets and integrated operations.

Japanese corporations in the 1980s also found themselves confounded by currency risks and protectionism. The 1985 Plaza Accord engineered a sharp appreciation of the yen against the dollar, with the exchange rate moving from 240 yen per dollar to JPY150 and reaching JPY80 a decade later. Simultaneously, the U.S. and Europe implemented export restraints, anti-dumping duties, and local content requirements against Japan's imports.

Japanese firms responded with a massive foreign direct investment campaign. **Toyota Motor**, **Honda Motor**, and **Sony Group** established manufacturing operations in the U.S. and Europe, transforming from exporters into global producers with distributed networks. Like their American predecessors, Japanese companies mastered intrafirm trade and transfer pricing to maintain competitiveness despite currency and trade challenges. Their expansion was particularly strategic in its geographic targeting, establishing production hubs that could serve entire continental markets while satisfying local-content requirements.

Global trade governance never fully caught up. The 1947 General Agreements on Tariff and Trade focused on reducing tariffs on goods among independent economies but struggled to address the complexities of multinational networks. The World Trade Organization replaced the GATT in 1995 with a mandate covering services, IP, and investment measures—partial recognition that trade increasingly occurred within corporate structures.

There are two challenges now. The first lies in reconciling borderless corporate structures with taxation rooted in national sovereignty during an era of rising economic nationalism. Corporations operate globally; tax authorities regulate locally. Until that mismatch is resolved, intrafirm trade will remain a source of political and fiscal strain. This tension fuels skepticism about globalization, despite the efficiency gains and innovation that integrated production networks deliver.

The second involves China. The scale of its exports is destabilizing. Yet the U.S. is directly and indirectly blocking it from pursuing a comprehensive direct investment strategy. This may be a more meaningful containment of China than the more than 60 U.S. military bases in the region.

One might object that unlike Japan in the 1980s, China now is an adversary, meriting a strong response. But Japan's status then was less clear. John Maynard Keynes opposed the economic bleeding of Germany after World War I not out of any affection for Berlin, but out of an appreciation for the likely consequences.

One need not believe in the Thucydides Trap to see that trying to asphyxiate China isn't going to end well. It isn't about ideological compatibility or strategic competitiveness, but realpolitik. B

RETIREMENT

How to Help Your Kids Without Hurting Yourself

BY ELIZABETH O'BRIEN

A tough job market for recent graduates is adding urgency to an age-old question for parents: How can I help my kid without jeopardizing my retirement?

At nearly 6%, the unemployment rate for college graduates ages 22 to 27 exceeds the national average of around 4%. This marks the reversal of a decades-long pattern where college grads fared better than "all workers."

While the unemployment rate is largely holding steady, many companies have been in wait-and-see mode, not adding new jobs over uncertainty about President Donald Trump's tariffs. What's more, early data show that artificial intelligence might be starting to affect entry-level jobs in technology and finance.

These trends have joined the rising cost of housing and higher education to make it harder for young people to reach financial independence than it was for their parents or grandparents.

"A lot of the discourse assumes the young adults are slackers and the parents don't have boundaries," says Monica Johnson, a sociology professor at Washington State University, who studies the transition to adulthood. In reality, she says, "becoming financially self-sufficient just takes longer."

Some parents worry that giving their adult children money will foster dependence, but the research doesn't bear that out, Johnson says. For most families, the bigger concern is that financial assistance to grown children will cause the parents to save less for their own retirement—potentially risking a situation where the children need to step in to support their elderly parents down the line. Here's how to know what you can afford:

• **Set a "Support Budget."** Investment firms like Fidelity say workers should save 15% of their pretax income for retirement, including any company match in a 401(k) plan. Treat retirement savings as an essential expense like your mortgage and calculate a "support budget" after accounting for that and other non-negotiables, says Alex Gonzalez, an advisor at Thrivent.

For example, if you bring in $10,000 a month, plan to save $1,500 for retirement. If you need $6,000 for other essential expenses, then the maximum amount you can afford to give your children is $2,500 a month. Limit such assistance to your cash flow, reducing dining out and other discretionary expenses if necessary.

Financial gifts above $19,000 per recipient in 2025 may require parents to file a gift tax return and will also count toward your lifetime gift and estate tax exemption of $13.99 million in 2025.

• **Communicate Your Expectations.** Some 38% of parents whose young adult children have come back home to live say the arrangement has impacted their long-term financial goals like retirement, according to Thrivent's annual Boomerang Kids Survey, released this spring. Yet 60% of young adults say their parents haven't discussed the financial impact of supporting them.

If your adult child comes home and runs up your grocery and utility bills, tell them how much more you're paying. Some parents may require a financial contribution toward these expenses, while others might ask their children to save a certain amount of money a month toward a place of their own.

Communicate the conditions you put on your assistance, Johnson says. If your adult child is living with you, rather than giving them a deadline to move out, it's often better to schedule regular meetings to set goals and check on the progress being made, she says.

If the money you give now reduces the resources that will be left over after your death, communicate that too. It's fine to decide that "I'd rather plan to help them launch than leave an inheritance," Johnson says. B

MAILBAG

The Real Heirs to Berkshire Hathaway

To the Editor:
A virtue shared by Berkshire Hathaway, Fairfax Financial Holdings, and Markel Group is that they all avoided chasing yield in their fixed-income portfolios when yields were low ("Berkshire Hathaway Wannabes Are Coming. We Sized Up the Contenders," Cover Story, June 6). They are now able to reinvest at higher yields and avoid the downdraft that sank Silicon Valley Bank and First Republic Bank. In contrast to Berkshire, Fairfax and Markel are buying back stock, and management is more accessible to investors.
Scott Chapman

Small-Cap Risks

To the Editor:
I agree with the premise of specific highfliers in the small-cap space proving to be marvelous investments ("Small-Cap Stocks Are Underloved. Why Their Time May Be Coming," Streetwise, June 6). But as Yogi Berra supposedly once said, predictions are hard to make, especially about the future. Between venture-capital firms overpaying for small companies and special-purpose acquisition companies bringing unworthy firms to the public—along with larger firms buying them up before they can even become public—the small-cap space has become a decidedly unfriendly place to invest.

In Praise of Musk

To the Editor:
Elon Musk is arguably the most successful entrepreneur of our generation ("'It Would Never Happen.' Why the Trump Feud Won't Push Musk Out as Tesla CEO," June 6). Unlike President Donald Trump, who has a limited time left in the spotlight, Musk will probably shape industries for decades to come. Musk has his shortcomings, but the U.S. is fortunate to have him driving innovation, especially at Tesla. With Tesla's future in batteries, robotics, and autonomous vehicles, who else would you want leading the charge? I wouldn't bet on anyone else.

Public Disservice

To the Editor:
In Martin Kimel's Other Voices column ("Elon Musk's Smashup of the SEC Won't Be Soon Forgotten," May 31), he was speaking not only for himself but also for tens of thousands of former federal government employees who took jobs in Washington and elsewhere "to devote themselves to the unglamorous work of serving the public." We all know that many federal agencies can be trimmed of staff, but this should be done through careful analyses of where those cuts should be made. This wasn't the case with the Securities and Exchange Commission or with any other cuts made by the Department of Government Efficiency. As a result, they will have the opposite effect of improving government.
Richard Eisinger
